Weather Records Available From Discontinued Weather Stations in Connecticut

(Supplement to Bulletin 461, "Climate Data Resources in Connecticut")

By David R. Miller, Associate Professor of Natural Resources and Chris Costello, Research Assistant, Department of Renewable Natural Resources
This report is a supplement to Storrs Agricultural Experiment Station Bulletin No. 461 "Climate Data Sources in Connecticut." The original bulletin details the climate stations in the State currently operating as of 1982. This supplement lists approximately 79 discontinued weather stations. These stations were in the NWS cooperative network and the data records are held at the National Climate Center.

Appendix I lists the stations, their geographic locations, dates of record, weather parameters measured and observers. Figure 1 shows the distribution of these stations in the state. Figures 2 through 6 show the area distributions of precipitation, temperature, wind, pressure and humidity measurements. Table I summarizes the historic record lengths of these stations.
