Bernert. Special thanks are due Frank Mauro, who painstakingly read an entire draft of this article and graciously played the role of intellectual provocateur. Jim Datri, Mike Callahan, and Mara Whitman pursued footnotes long after most would have succumbed to other temptations.

Research support was provided by the University of Connecticut Law School Foundation and the Fiscal Policy Institute.
INTRODUCTION

One of the catalysts for the Tax Reform Act of 1986 was the efforts of Citizens for Tax Justice ("CTJ"), a Washington-based think tank. Working with data from annual reports to shareholders and to the Securities and Exchange Commission ("SEC"), CTJ documented that some of the largest, most profitable corporations in the country were paying little or no federal income taxes. Indeed, General Electric during a three year period actually received tax refunds of $283 million despite pre-tax domestic profits of over $6.5 billion. Six other companies—Boeing, Dow Chemical, Tenneco, Santa Fe Southern Pacific, Weyerhaeuser, and Du Pont—received net benefits or refunds in excess of $100 million each, notwithstanding profits totaling $9.8 billion.1 According to Representative Dan Rostenkowski, Chairman of the House of Representatives Ways and Means Committee, the public outcry that resulted from the disclosure of the nominal federal income taxes paid by some of the largest corporations in the country was one of the keys to the sweeping 1986 changes that broadened the base, lowered the rates, and provided more uniform treatment of taxpayers. "When people look at

---

their own tax bills and then hear that big, profitable corporations are able to manipulate the system to escape taxation, 'that's when the revolution comes.'"2

CTJ's work had a profound effect on educating the public about the need for corporate tax reform. The 1986 Tax Reform Act was ultimately supported by many in the business community.3 But CTJ's work cannot be replicated at the state level. SEC reports and annual shareholder reports contain information on the aggregate amount of state and local income taxes, but the information is not broken down state-by-state.4 And, until very recently, only Wisconsin allowed the public to obtain information on the amount of state income tax paid by specific corporations.5

In the past several years, attention has turned increasingly to the states. Cutbacks in federal aid and the recession, which continue to plague parts of the country, as well as tangible and intangible factors have resulted in ongoing budget problems. Corporate tax payments, in many states, have continued to decline and to vary in ways that seem unrelated to economic conditions. These developments, together with the enactment of an increasing number of corporate tax incentives at the state level, have led many analysts to conclude that information about the impact of state tax systems on specific corporations is necessary for intelligent tax policy making.

Corporations pay over $20 billion annually in state corporate income taxes, but the lack of information on the amount of state income tax paid and credits taken by specific corporations in each state makes it impossible to evaluate the extent to which the corporate tax burden is allocated fairly or rationally in relationship to measures of profitability. Nor is it possible to analyze accurately the effectiveness of the billions of dollars expended annually in state tax incentives because it is not known which corporations receive what type of incentives and in what amounts.

3. Citizens for Tax Justice has been given credit for playing a key role in the passage of the 1986 Tax Reform Act. See, e.g., JEFFREY H. BIRNBAUM & ALAN S. MURRAY, SHOWDOWN AT GUCCI GULCH 11-13, 88 (1987). For a fuller description of CTJ's work, see infra note 172 and accompanying text.

For an example of the support of major sectors of the business community of the 1986 changes, see Statement of Harry Sullivan, on behalf of the Tax Reform Action Coalition ("TRAC") before the Committee on Ways and Means, House of Representatives on The Impact, Effectiveness and Fairness of the Tax Reform Act of 1986 (Feb. 7, 1990).

4. See infra note 168 and accompanying text.

5. See infra part II.D.
In 1987, an unpublished but widely circulated study by the staff of the New York Tax Study Commission concluded that the amount of state corporate income taxes paid and other related information should be publicly available on a corporation-by-corporation basis. In the last few years, three states have adopted laws providing for some state-level disclosure by name of corporation. Arkansas and West Virginia make available by name of taxpayer—both individuals and corporations—the amount of selected credits claimed; in Massachusetts, publicly traded corporations, insurance companies, and most banks, doing business in that state will soon file an array of state tax information that will then be available for public inspection on a corporation-by-corporation basis. The rest of the states prohibit the disclosure of any corporate tax data by name of corporation.

6. N.Y. LEGISLATIVE COMMISSION ON THE MODERNIZATION AND SIMPLIFICATION OF TAX ADMINISTRATION AND THE TAX LAW, PUBLIC DISCLOSURE OF CORPORATE TAX INFORMATION (1987) [hereinafter N.Y. REPORT]. In the interest of disclosure, readers should know that the author was Director of the N.Y. Commission.

change in the law to provide greater public access to corporate tax information.  

Proposals calling for the release of information on the amount of state corporate income taxes paid and other tax-related data on a corporation-bycorporation basis have been treated as innovative, if not radical. This reaction, however, overlooks the extensive nature of the financial information, including tax information, that is already in the public domain because of SEC regulations and generally accepted accounting principles ("GAAP"). Moreover, even before SEC-mandated disclosure, the amount of income taxes paid by corporations and even individuals was, at various times, public information. In the 1920's, for example, newspapers trumpeted this information on the front pages. Even today, a bona fide shareholder of record who owns at least one percent of a corporation may inspect its tax return and that of its subsidiaries, but may not disclose any information obtained from the inspection. Far from an extraordinary measure, calls for disclosure are based on rather traditional values based principally on the notion that the public as well as elected officials should be informed about the workings of our economic and legal systems and that public policy should be made in an open and informed manner.

This article is organized around five sections. Part I traces the history of public access to federal tax returns. Besides debunking the common perception that corporate tax returns have always been immune from public scrutiny, this historical survey reveals a different story. The privacy issue was basically fought over the issue of whether individual, not corporate, tax returns should be public information. When corporations entered this debate at all, it was essentially with regard to the privacy of "mom and pop" businesses, which were viewed as the alter ego's of their owners. Further, the last chapter of this Congressional debate occurred during the early 1930's and was colored by the Lindbergh kidnapping and the crime wave that marked the Great Depression. Individuals feared that if their returns were made public, they would be marked by kidnappers, con artists, and those of similar ilk. By way of contrast, when the issue of whether the public should

9. As of May 1993, five states have discussed corporate tax disclosure laws. See Massachusetts Special Commission on Business Tax Policy, CORPORATE TAX DISCLOSURE: GOOD OR BAD FOR THE COMMONWEALTH?, DRAFT WORKING REPORT (1993), [hereinafter MASSACHUSETTS STAFF DRAFT]. For a discussion of this report, see infra note 182 and accompanying text.

10. See infra part I.G.

have access to corporate tax data was debated in 1909 independently of individual returns, Congress opted for disclosure.

Part I also reviews the disclosure of income tax information that is mandated by the SEC under its own regulations and by the requirement that corporations under its jurisdiction follow GAAP. In fact, the amount of income tax data now subject to disclosure by the SEC and GAAP far exceeds anything that proponents of disclosure ever hoped to obtain from Congress.

Part II examines the experiences of the four states that have adopted some form of corporate tax disclosure legislation. As mentioned previously, these states are Massachusetts, West Virginia, Arkansas, and Wisconsin.

Part III analyzes the case for and against state-level disclosure and concludes that the case in favor of disclosure overwhelmingly outweighs the counter arguments. Consequently, Part IV discusses the key issues involved in designing and implementing state-level disclosure laws. A brief summary is contained in Part IV also.

I. THE DISCLOSURE OF INCOME TAX INFORMATION AT THE FEDERAL LEVEL: AN HISTORICAL PERSPECTIVE

The heart of the following portion of this article is a study of the public's access to federal tax return information. This study is organized chronologically around six key time periods. The first time period is marked by the Civil War income taxes, which at one time provided for the publication of the names of individuals and the amount of taxes they paid. The Civil War income taxes did not apply to corporations. By the end of the War, however, Congress prohibited this practice.

The Civil War income taxes were followed by a second attempt to provide for public access to tax return data. The short-lived 1894 Income Tax apparently reflected the still lingering hostility to the disclosure of tax information during the Civil War because Congress once again made it unlawful to publish income tax data.

The next important event occurred with the Tariff Act of 1909, the predecessor of the modern corporate income tax. Significantly, the 1909 law provided that corporate returns should be open to public inspection. Almost immediately, opponents of disclosure started to emasculate this provision. After some political vacillation, Congress provided that corporate returns should be open to inspection upon order of the President under rules prescribed by the Secretary of the Treasury and approved by the President.

The 1913 Income Tax, the predecessor of today's personal income tax, carried over this provision. However, this power was never exercised very broadly by any president. In reaction, starting in 1918, proponents of disclosure pressed for broader laws and achieved some minor victories.
The zenith of the Congressional tax disclosure movement occurred in 1924 when the public was provided access to the names of corporations, as well as individuals, and the amount of taxes each paid. Two years later, a backlash was successful in narrowing the law to provide access to only the names of taxpayers filing returns, but not to the amount of taxes paid.

Advocates of disclosure achieved a hollow victory in 1934 with the infamous "pink slip" provisions. Corporations and individuals were required to file a pink slip with their tax returns containing information on income, deductions, credits, and tax liability. These slips were to be available for public inspection. Before the effective date of this requirement, however, a well orchestrated pink slip rebellion occurred and the law was repealed. This was the last time Congress debated the general public's access to tax return information.

The final portion of Part I describes the extensive disclosure of financial and income tax data mandated by the SEC and GAAP.

A. The Civil War Income Taxes: 1861-1872

The original Civil War Income Tax Act, passed in 1861, provided that "the said taxes, when so assessed and made public, shall become a lien on the property or other sources of said income for the amount of the same . . ." This provision apparently provided the only reference to whether tax information was to be made public. Because the 1861 Act never became effective, no information exists on how this provision was to be interpreted.

The 1862 Act, which replaced the 1861 Act, was more explicit than its predecessor. The 1862 Act provided for a period of fifteen days in which the public could examine the names of taxpayers and the amount of their liabilities. The public was notified of this opportunity through

14. Id. § 49 (emphasis added).
16. The 1861 tax was regarded as essentially provisional and Secretary of the Treasury Chase did not attempt to collect it. DISNEY RATNER, TAXATION AND DEMOCRACY IN AMERICA 68 (1967).
18. The Act provided:
newspaper advertisements and other posted notices. Similar provisions were made for publicizing the collectors lists.19

The publishing of the amount of taxes owed was presumably a response to the lack of mass communication, sufficient administrative procedures or machinery, or reliable mail systems. The posting of both "assessor's lists" and "collector's lists" in public places was a means of notifying taxpayers that they owed taxes, as well as the amount of their liability, and of the arrival of the tax collector.20 Representative Porter of Indiana echoed this consensus about the purpose of the publicity feature: "Now, what is the object of the [publicity] provision? Obviously it is to give the tax payer time to collect his money in order to be ready when the collector arrives."21

Initially, the 1862 Act was not interpreted so as to permit public examination of the underlying tax information.22 Early in 1863, the Commissioner directed that returns should be available only to tax

And be it further enacted, That the assessors for each collection district shall, by advertisement in some public newspaper published in each county within said district, if any such there be, and by written or printed notifications, to be posted up in at least four public places within each assessment district, advertise all persons concerned of the time and place within said county when and where the lists, valuations, and enumerations made and taken within said county may be examined; and said lists shall remain open for examination for the space of fifteen days after notice shall have been given as aforesaid.

Ch. 119, § 5, 12 Stat. at 437.

19. Ch. 119, § 19, 12 Stat. at 439. The Act of 1862 authorized the President to divide the country into "convenient collection districts," and to appoint with the advice and consent of the Senate an assessor and collector for each collection district. Id. The assessor was charged with the duty of locating objects of taxation and preparing assessment lists to be delivered to the collector. These lists constituted the warrant of the collector for the collection of assessable taxes. Those subject to the income tax were required to file an annual return with the assistant assessor. The assessor heard all appeals and issued summonses to delinquents. U.S. OFFICE OF INTERNAL REVENUE, HISTORY OF THE INTERNAL REVENUE SERVICE: 1791-1929, at 4, 5 (1930) (prepared under the direction of the Commissioner of Internal Revenue).

20. RETURN CONFIDENTIALITY, supra note 15, at 4 ("The imposition of this provision for advertisement of assessor's lists, therefore, appears to have been intended to publicize the tax assessment of each citizen, and to communicate to each citizen his lawful obligation to pay.").

officials so that the income tax "might not be felt to be inquisitorial." Newspapers strongly urged permission to print tax returns. In a second ruling, the Commissioner acceded. The Commissioner defended his action as providing "the amplest opportunity . . . for the detection of any fraudulent returns that may have been made." In 1863, the Secretary of the Treasury's legislative recommendation was to the contrary, however, requesting that Congress prohibit disclosure of tax returns.

The Revenue Act of 1864 disregarded this recommendation by providing that the assessors "submit the proceedings of the assessors . . . and the annual lists taken and returned to the inspection of any and all persons who may apply for that purpose." Newspapers began publishing lists of reported incomes and taxes paid.

Not all newspapers favored disclosure, although some changed their positions on this issue over time. At the end of 1864, The New York Times lamented the lack of secrecy. A month later, the New York Tribune published a list of incomes and wrote an editorial supporting its decision: "So long as an Income Tax shall be required and levied, we are satisfied that it is best for all who are honestly concerned therein that there should be no restriction on giving publicity to the items." About eighteen months later, The New York Times shifted its views to those of the Tribune and stated that publicity prevented collusion between taxpayers and collectors and that only by making tax returns public could full compliance be secured. The Times asserted that in 1864 and 1865, the

publicity provisions generated millions of dollars for the government. In opposition, the Commercial and Financial Chronicle argued that publicity led to the falsification of returns for the purpose of ostentation and for securing credit.

By the end of the Civil War, newspapers customarily published income tax information. Horace Greeley concluded that publicity "has gone far toward equalizing the payments of income tax by the rogues with that of honest men." The New York Times continued supporting publicity:

Show every taxpayer's sworn return of income to his nearest neighbors, his most intimate friends, to himself, indeed, in public journals, and you have a security that no laws, no oaths, and no scrutiny, has or can furnish. In no other way can the income tax law be so efficiently and so searchingly executed and enforced as by the regularity and certainty of the publication of income assessment lists.

While there was certainly a splintered voice of opposition from the start, "objections appeared to arise more frequently [only] when the major newspapers began to publish the incomes of the leading citizens." Representative (and later President) James A. Garfield argued that tax returns should be available to the public but should not be published by newspapers:

Suppose a man has had serious losses during the year, so that his income would be smaller than people expect it to be. Now, he would not want to let that be known so as to alarm his creditors and bring them all down upon him when otherwise he would come out safely. There is no reason in the world, unless the public interests require, that the private affairs of individuals should

32. SMITH, supra note 25, at 67.
33. Comm. and Financial Chron. 162 (1866). This position was consistent with The New York Times' assertion that disclosure had generated millions of dollars, although presumably the Times was not attributing this figure to taxpayers who filed false returns reporting more income than they actually had.
34. See, e.g., War Tax, supra note 29, at 5; see also Kossuth K. Kennan, Income Taxation 251 n.16 (1910); SMITH, supra note 25, at 66-68; Hill, The Civil War Income Tax, 2 Q.J. Econ. 416, 436 (1894).
be brought out and paraded in the public papers. I admit that some sort of publicity is necessary to act as a pressure upon men to bring out their full incomes, but if the lists are left open for public inspection it will be an ample pressure upon them.38 Arguments such as Garfield's were reinforced by assertions that as tax officials gained experience, citizen-watchdog assistance was less needed and less justifiable.39

As the post Civil War income taxes became unpopular, the publicity feature was also attacked. In 1869, The New York Times reverted to its earlier position opposing disclosure, arguing that a properly organized revenue force could prevent evasion and obviate the nuisance of publicity.40 It denounced the publishing of returns as "offensive and objectionable."41

In 1870, a new Commissioner prohibited assessors from furnishing tax lists for publication, although the public was still allowed to inspect returns.42 This position, which mirrored Garfield's views, was apparently taken in the hope of "lowering voices" over this increasingly contentious issue.43 Congress responded to complaints about disclosure in 1870 by providing that "income tax returns or any part thereof . . . shall not be published."44 The Civil War Income Tax died at the end of 1871, in part due to the rising concerns over privacy, which were not entirely put to rest by the 1870 statutory revision.45 Because the Civil War income

38. CONG. GLOBE, 39th Cong., 1st Sess. 2789 (1866).
39. See, e.g., S. REP. NO. 266, supra note 22, at 837.
40. The Income Tax—Its Repeal or Amendment, N.Y. TIMES, July 26, 1869, at 4.
42. S. REP. NO. 266, supra note 22, at 839.
44. The Act of July 14, 1870, ch. 255, § 11, 16 Stat. 256, 259 (1870), provides:

[N]o collector, deputy collector, assessor, or assistant assessor shall permit to be published in any manner such income returns, or any part thereof, except such general statistics, not specifying the names of individuals or firms, as he may make public, under such rules and regulations as the commissioner of internal revenue shall prescribe.

Id.

The literature is silent on how this provision was to be interpreted. Presumably, because the income tax expired shortly after the passage of this law, there was not enough time or reason for such questions to arise.

45. S. REP. NO. 266, supra note 22, at 838; see also SMITH, supra note 25, at 68 ("Much of the opposition to the tax would never have been raised if it had not (continued)
taxes did not apply to corporations, these concerns about privacy were limited only to individuals.46

B. The 1894 Income Tax

The memory of these concerns and of the demise of the income tax that the publicity provisions had partly caused, was reflected in the non-disclosure provision of the short-lived revival of the income tax in 1894.47 The 1894 Act provided, "it shall be unlawful for any person to print or publish in any manner whatever not provided by law, any income return or any part thereof."48 Apparently during the floor debates,

been felt that [publicity] was an unnecessary exposure of private affairs. It is very questionable whether the benefit received from publicity was not entirely offset by the injury it did, because of the antagonism to the tax which it aroused."). Garfield also described the publicity features as making the tax "odious in many parts of the country." EDWIN R.A. SELIGMAN, THE INCOME TAX: A STUDY OF THE HISTORY, THEORY AND PRACTICE OF INCOME TAXATION AT HOME AND ABROAD 452 (1914).

46. By virtue of an administrative directive of the Commissioner, the 1862 Act was interpreted to exclude firms of any sort from taxation. RATNER, supra note 16, at 76 n.41. The Act imposed the tax on the "annual gains, profits, or income of every person residing in the United States, whether derived from any kind of property, rents, interest, dividends, salaries, or from any profession, trade employment, or vocation carried on in the United States or elsewhere." Act of July 1, 1862, ch. 119, § 90, 12 Stat. 432, 473 (1862). If the word "person" is read to include entities as well as individuals, which would be today's usage, see I.R.C. § 7701(a)(1) (1986), the 1862 tax would apply to corporations. Elsewhere in the statute, however, "person" is used to refer to only individuals. See, e.g., ch. 119, § 93, 12 Stat. at 475 ("persons of lawful age"). In any event, by 1864, the law was clarified. The 1864 Act provided that income was to include the share of any person of the gains or profits, whether divided or not, of all companies or partnerships, which suggests that it was the shareholder and not the corporation that was intended to be taxed on corporate profits. See Act of June 30, 1864, ch. 173, § 173, 13 Stat. 232 (1864). The author has been unable to find any discussion about the administrative burdens arising from this early approach to integration.

48. Act of Aug. 27, 1894, ch. 349, § 34, 28 Stat. 557-58 (1894) provides:

[I]t shall be unlawful for any collector, deputy collector, agent, clerk, or other officer or employee of the United States to divulge or to make known in any manner whatever not provided by law to any person the operations, style of work or apparatus of any manufacturer or producer visited by him in the discharge of his official duties, or the amount or source of income, profits, losses, expenditures, or any particular thereof, set forth or disclosed in any income return by any person or corporation, or to permit any income return or copy thereof or any book containing
Congressmen did not discuss the privacy aspects of the bill. Presumably, the lessons of the Income Tax Act of 1862 were carried over to the Income Tax Act of 1894, which required that tax returns be confidential. When the tax was held unconstitutional in 1895, the Commissioner issued an order directing that all income tax returns already collected were to be burned.

Although the earlier tax acts had encompassed only individuals, the 1894 Act was imposed on both individuals and corporations. Thus, the privacy extended to corporate income tax returns in 1894 was adopted without the benefit of any debate, arriving virtually on the coattails of the lingering public sentiment about the privacy of individual returns. When, however, Congress adopted a tax on only corporations, as was true in 1909, it was willing to move in the direction of disclosure.

any abstract or particulars thereof, to be seen or examined by any person except as provided by law; and it shall be unlawful for any person to print or publish in any manner whatever not provided by law, any income return or any part thereof or the amount or source of income, profits, losses, or expenditures appearing in any income return; and any offense against the foregoing provision shall be a misdemeanor and be punished by a fine not exceeding one thousand dollars or by imprisonment not exceeding one year, or both, at the discretion of the court; and if the offender be an officer or employee of the United States he shall be dismissed from office and be incapable thereafter of holding any office under the Government.

Id.

The reference to divulging the operations, style of work, or apparatus of any manufacturer or producer was originally adopted in 1864 in ch. 173, § 38, 13 Stat. 238 (later codified in R.S. 3167 (1878)). In 1864, there was no reference to the disclosure of income tax returns. That language was added as part of the 1894 income tax.

C. The Tariff Act of 1909

In 1909, Congress passed the Payne-Aldrich Tariff Act,\textsuperscript{54} the predecessor of the modern corporate income tax, and once again the disclosure issue was resurrected. Because the Payne-Aldrich Act did not apply to individuals, this was the first time the disclosure issue was debated solely in the context of corporations. Significantly, the 1909 law, contrary to the 1894 Act, provided that corporate returns "shall constitute public records and be open to inspection as such."\textsuperscript{55}

No statements in the hearings or reports regarding the underlying rationale for this provision exist,\textsuperscript{56} but from the surrounding discussion and events, Congress' willingness to adopt a different privacy standard for corporations than for individuals becomes clear. By 1909, the growing labor movement and the still-fresh legacy of former President Theodore Roosevelt's well-publicized trust-busting campaign had created a widespread popular distrust of corporations. Although "[t]he legislative history does little to illuminate [the publicity] provisions,"\textsuperscript{57} it seems likely that the new national mood had much to do with the reversal of disclosure policy.

Floor debate on the Tariff Act provides a barometer of the country's mood. Senator Bourne, for example, praised the publicity provisions:

[T]he Government, at least, will have cognizance of all corporation earnings, and a method is provided by which the stockholders may secure such information, since the returns to the Government become public records. Thus will be eliminated in the future the possibility of concealed equities; corporation melon cuttings' will be done away with; the responsibility of corporation management to all the stockholders will be established; the holder of one share of stock will have opportunity of acquiring as much information concerning corporation affairs as the owner of 100,000 shares.

Corporations will be popularized and "peopleorized;" the tendency will be for people to invest their earnings in corporation securities on the assumption that the publicity feature and

\textsuperscript{54} Act of Aug. 5, 1909, ch. 6, 36 Stat. 11, 116 (1909).
\textsuperscript{55} Ch. 6, § 38, 36 Stat. at 11, 116.
\textsuperscript{56} RETURN CONFIDENTIALITY, supra note 15, at 10.
\textsuperscript{57} S. REP. NO. 266, supra note 22, at 840.
greater opportunity for governmental supervision will protect their investments . . . \textsuperscript{58}

Senator Bourne also felt that disclosing corporate returns would uncover and discourage dishonest business practices and bookkeeping. "All legitimate business should welcome this legislation, and only the business pirate need fear and oppose it."\textsuperscript{59} To Senator Bourne, the public disclosure of corporate returns was one of the most significant provisions of the corporate income tax.\textsuperscript{60} Other senators, who only marginally supported the corporate income tax law, were nonetheless strong defenders of the disclosure of corporate returns.\textsuperscript{61} President William Howard Taft, who vigorously defended the disclosure of corporate income tax returns, played an important part in winning the support of the progressive element of the Republican Party.\textsuperscript{62} He believed that the publicity feature of the law was more valuable than the tax's revenue potential.\textsuperscript{63}

Shortly after the passage of the 1909 Tariff Act, opponents started an active campaign to weaken the publicity features. Small corporations, especially those whose securities were not listed on the exchanges, and thus were not accustomed to providing any public information, lobbied hard against the broad 1909 publicity feature.\textsuperscript{64} This opposition was spearheaded by the Illinois Manufacturers' Association, which held a conference of industrial and commercial associations in 1910, described as

\textsuperscript{60} Id. at 4001.
\textsuperscript{61} Id. at 4006.
\textsuperscript{62} Maurice H. Robinson, The Federal Corporation Tax, 1 Am. Econ. Rev. 691, 707-08 (1911); S. Doc. Rep. No. 98, 61st Cong., 1st Sess. Ironically, when the law was changed in 1924 to permit the publication of the names of both individuals and corporations and the amount of taxes paid, see infra part E, note 84 and accompanying text, The New York Times trumpeted the amount paid by Charles Taft, the former President's brother. (At the time of publication, former President Taft was Chief Justice of the Supreme Court.) See Charles P. and His Wife of Cincinnati File Return of $440,729, N.Y. Times, Oct. 25, 1924, at A2.
\textsuperscript{63} Letter from Archie Butt to Clara Butt (Jan. 20, 1911), in 1 Taft and Roosevelt: The Intimate Letters of Archie Butt, Military Aide, at 262-63 (1930).
\textsuperscript{64} Robinson, supra note 62, at 708. These groups had a friend in Franklin MacVeagh, President Taft's Secretary of the Treasury, who said that if he were subject to the disclosure law, he would do all he could "to evade the law." Ratner, supra note 16, at 295. "The amazing statement made by MacVeagh as a responsible government official was surpassed by the campaign of invective against the tax released by businessmen." Id.
"the first gun for a national movement which has in view the uniting of all" who sought to eliminate disclosure. The basic argument was premised on the notion that the disclosure provisions discriminated between the larger and smaller corporations, as well as between corporations and partnerships and proprietorships. Within a month of the 1910 conference, the Commissioner issued his first decision on administering the publicity features of the Act. He ruled that because Congress had made no specific appropriation for public inspection of the returns, the records would be treated as confidential. In effect, this ruling suspended the publicity provisions unless Congress provided financing. The Illinois Manufacturers' Association claimed credit for this administrative victory.

In response to the Commissioner's shifting the onus onto the legislative branch, Congress appropriated $25,000 for the purpose of classifying, indexing, and exhibiting tax returns, but provided the significant condition that "any and all such returns shall be open to inspection only upon order of the President under rules and regulations to be prescribed by the Secretary of the Treasury and approved by the President." Presumably, Congress intended by this provision to back away from the public disclosure of corporate returns. Some felt this compromise sorely undermined the benefits of the publicity feature and granted too much power to the President. Representative Underwood, for example, presented the following argument:

66. To be sure, this discrimination could have been eliminated by providing that individual returns should also be open to inspection, but this position was not part of the Association's agenda. There are, however, legitimate reasons for distinguishing between corporations and individuals. See infra part III.F. and IV.A. Removing individuals from the ambit of disclosure recognizes that they have more legitimate rights of privacy than do corporations. If individuals are not covered, opponents of corporate disclosure can then assert that corporations are being unfairly treated. This argument, however, is disingenuous because such opponents are not interested in extending disclosure to individuals but only in scuttling disclosure for corporations.
68. Robinson, supra note 62, at 708-09. The 1909 Act was challenged as unconstitutional. According to one commentator, the publicity features, which were considered to be a very important feature of the bill, were not enforced until the Act was upheld in Flint v. Stone Tracy Co., 220 U.S. 107 (1911). Kennan, supra note 34, at 286. The Court upheld the Act against charges that the inspection of corporate returns violated the Fourth Amendment. Flint, 220 U.S. at 176-77.
70. S. REP. NO. 266, supra note 22, at 841.
If you pass this amendment and the President of the United States wants to use the publicity as a whip over any corporation of this country, he can do so. . . . If you are going to have publicity of any kind, why not have honest, straightforward, full publicity, and let all the world know what is going on, and not a subterfuge of this kind.71

Pursuant to this Congressional delegation, the Secretary of the Treasury, with the approval of the President, provided access to corporate returns under two broad circumstances. First, bona fide shareholders could apply for permission to inspect the tax returns of their corporations by simply making out a showing of cause. The Secretary had full discretion in deciding whether to grant permission. Second, anyone could inspect the returns of corporations listed on public exchanges, if the stock was advertised in the press or offered for public sale by the corporation itself.72 Returns were open to inspection, however, only at the office of the Commissioner. Provisions for furnishing a copy of any return to any person were not available.73 Further, the Act made it unlawful for anyone to print or publish, in any manner not provided by law, any income tax return or any part thereof.74 This provision was commonly interpreted as preventing the publication of information obtained from inspecting returns.

D. 1913 - 1923

The 1913 Income Tax Act was applicable both to individuals and corporations. The law mirrored the 1910 changes regarding disclosure. In pertinent part, the Act provided that tax returns "shall constitute public records and be open to inspection as such: Provided, That any and all such returns shall be open to inspection only upon the order of the President, under rules and regulations to be prescribed by the Secretary of the Treasury and approved by the President."75 The President, however, did

73. Id.
75. Income Tax Law of 1913, ch. 16, § II(G)(d), 38 Stat. 114, 177 (1913). The Act also provided that,

[proper officers of any State imposing a general income tax may, upon the request of the governor thereof, have access to said returns or to an abstract thereof, showing the name and income of each such

(continued)
not exercise his authority to provide public inspection of individual tax returns, allowing instead the Progressives in Congress to debate access to income tax returns during the consideration of subsequent revenue acts. Progressives argued that publicity would end improper trade policies, business methods, and conduct, and would further assure fuller and more accurate reporting by taxpayers.

In 1918, advocates of disclosure nibbled away at the President's discretionary power by requiring the Commissioner to make available for public inspection in the offices of every collector, and elsewhere at his discretion, lists enumerating the names of individuals, but not corporations, who had filed returns in that district. The law was later amended to grant to a bona fide shareholder of record, who owned one percent or more of the outstanding stock of a corporation, the right to examine the annual income tax returns of such corporation and its subsidiaries. The law provided, however, that it was a misdemeanor punishable by a fine not exceeding $1000 or by imprisonment not exceeding one year for a shareholder to make "known in any manner whatever not provided by law the amount or source of income, profits, losses, expenditures, or any particular thereof, set forth or disclosed in any such corporation ... at such times and in such manner as the Secretary of the Treasury may prescribe.

Id.

Seligman attributes this provision to LaFollette, the Progressive Senator from Wisconsin. Seligman's explanation seems reasonable; LaFollette was an avid supporter of disclosure and Wisconsin was the only state to have an income tax at this time. See Seligman, supra note 45, at 699.

76. S. REP. NO. 266, supra note 22, at 844. The 1910 regulations concerning access to corporate returns, see supra note 72 and accompanying text, were reformulated. See T.D. 2016, 62 (1914). One difference was that the 1913 regulations allowed a corporation the opportunity to state whether any legitimate reason existed for refusing permission to the shareholder seeking to inspect the return.

77. See, e.g., 61 CONG. REC. 7365-74, 7518-19 (1921).

79. Id. Such shareholders could examine even the returns of years prior to the time that they became shareholders provided that ownership of one percent or more of the outstanding stock existed at the time of the request for inspection. I.T. 1648, II-1 C.B. 186 (1923). Conversely, former shareholders were not allowed to inspect the return of the corporation for any year. Id. There was no statutory provision for examining a consolidated return by a stockholder in one of the subsidiary companies. I.T. 1588, II-1 C.B. 184 (1923). A shareholder's privilege to inspect was personal and could not be delegated to another. Reg. 74, Art. 424 (1928); Reg. 69, Art. 1093 (1924); Reg. 65, Art. 1094 (1924); Reg 62, Art. 1093 (1922); Reg. 45, Art. 1093 (1920).
return. Presumably, this provision would be violated if a shareholder published in a newspaper the amount of tax paid by a corporation. Also, the regulations were reissued allowing the public the right to inspect returns of listed or publicly-sold corporations. Further, the Act permitted any shareholder, at the discretion of the Secretary of the Treasury, upon a proper showing of cause, to inspect the return of his or her corporation. The right of one percent or more shareholders to examine the income tax returns of their corporations still exists today, along with the prohibition on disclosing information obtained.

E. The 1924 and 1926 Acts

By 1924, the public disclosure of income tax returns had become a rallying cry for farm-bloc senators who warned that "secrecy is of the greatest aid to corruption" and urged that "to-day the price of liberty is not only eternal vigilence [sic] but also publicity." Forces calling for disclosure achieved some success in the Revenue Act of 1924, which required the names of both individuals and corporations filing returns to be posted, along with, significantly, their tax liabilities. Although

81. See supra note 72 and accompanying text. These regulations were eliminated in 1920. See T.D. 2961, 22 Treas. Dec. Int. Rev. 3 (1920).
82. See I.R.C. § 6103(e)(1)(D)(iii) (1986). In 1921, the LaFollette bloc in Congress unsuccessfully attempted to change the law to require the publication of returns, but the bill was defeated in the Senate 28-34. The votes in favor all came from the farm bloc (Kansas, Washington, Iowa, Oregon, South Dakota, and Nebraska), joined by LaFollette. The votes in opposition were all Republicans. Uncle Sam Favors Paul Pry, The Independent, Nov. 8, 1924, at 353. After this bill was defeated, LaFollette unsuccessfully tried to make the amount of income declared by each taxpayer open for inspection. 61 Cong. Rec. 7365-74, 7518-19 (1921).
84. Revenue Act of June 2, 1924, ch. 234, § 257(b), 43 Stat. 293 (1924), which provides:

The Commissioner shall as soon as practicable in each year cause to be prepared and made available to public inspection in such manner as he may determine, in the office of the collector in each internal-revenue district and in such other places as he may determine, lists containing the name and the post-office address of each person making an income-tax return in such district, together with the amount of the income tax paid by such person.
some advocates of disclosure wanted the entire return published,\(^8\) questions were raised about whether this would seriously hamper the routine work of the Bureau of Internal Revenue.\(^6\)

The 1924 change was supported by Democrats and insurgent Republicans.\(^7\) Supporters offered two principal arguments: (1) publicity would discourage tax evasion, promote honesty, and increase revenue; and (2) publicity would end improper trade policies, business methods, and conduct.\(^8\) Publicity was bitterly opposed by Secretary of the Treasury Mellon, Senator Smoot, Secretary of Commerce Herbert Hoover,\(^9\) and Representative Ogden L. Mills, who would later become Secretary of the Treasury under President Herbert Hoover. They maintained that publicity had failed to increase revenue in the past, had actually encouraged tax evasion, and had led to undesirable newspaper gratification of public curiosity.\(^9\) When President Calvin Coolidge

---

The House bill permitted public inspection only under rules prescribed by the Secretary and approved by the President. The Senate bill provided for complete disclosure. Roy G. Blakey & Gladys C. Blakey, The Federal Income Tax 245 (1940).

In 1924, the law also expanded state access to federal corporate income tax returns. "The proper officers of any State may, upon the request of the governor thereof, have access to the returns of any corporation, or to an abstract thereof showing the name and income of the corporation, at such times and in such manner as the Secretary may prescribe." Revenue Act of June 2, 1924, ch. 234, §257(a), 43 Stat. 253 (1924). Previously, such access on the part of state officers was limited to those states which levied an income tax. See supra note 75 and accompanying text.

The 1924 Act was upheld against attacks that it violated an individual's right to privacy and the right to be secure in his or her personal effects and papers. Hubbard v. Mellon, 5 F.2d 764 (D.C. Cir. 1925).

85. 65 CONG. REC. 2512, 2952-60 (1924). The Progressives apparently did not view the 1924 Act as a victory but rather a defeat for their position of making returns open to inspection. 68 CONG. REC. 9403-05, 9078, 9851.

87. Paul Pry Legislation, LITERARY DIGEST, Mar. 8, 1924, at 12.

88. S. REP. NO. 266, supra note 22, at 843.

89. Secretary of Commerce Herbert Hoover issued a statement that the publicity of returns caused harm to business, especially to the small trader, because competitors found out too much valuable information. He characterized the publicity of returns that existed from 1867 to 1872 as contributing to the industrial and financial chaos of those times. Id. at 245 n.95. Presumably, he meant 1867 to 1870; publication was abolished in 1870. See supra note 42 and accompanying text.

signed the bill, he issued a statement objecting *inter alia* to the publicity provisions.91

These provisions apparently raised almost no popular indignation until tax information was printed in the newspapers a few days before the 1924 election:92

Although some newspapers refused to publish this information, coverage was extraordinarily comprehensive. Whole pages were devoted to lists of payments by local citizens. Feature stories reported on the biggest corporate assessments and the tax payments of prominent out-of-towners like Babe Ruth or Standard Oil. Teasers told of divorcees who were investigating their husband's income and wealthy taxpayers who escaped with paltry tax payments.93

*The New York Times* and other newspapers devoted entire pages to publishing the amount of taxes paid by thousands of persons.94 Enterprising persons published pamphlets containing the names of taxpayers and the amounts they paid.95 What is more, the U.S. Supreme Court upheld the right of newspapers to print the lists made public.96

The *New Republic* added a twist in an attempt to defend the publicity provisions by focusing on the number of person's salaries that were already public information:

First . . . are . . . the [e]mployees of cities, counties, states, and nation—the laborers, street-sweepers, firemen, policemen, clerks, stenographers, mail-carriers, bookkeepers, teachers, librarians, scientists, accountants—all those whose salaries are

95. Apparently, a similar book exists in Sweden where the official assessment lists, showing the amounts of assessable income as determined by the assessment boards, are public documents. See infra note 165.
96. United States v. Dickey, 268 U.S. 378, 388 (1925) (holding that R.S. § 3167, making it "unlawful for any person to print or publish in any manner whatever not provided by law, any income return or any part thereof" did not apply to the publicity provisions of the 1924 Act); United States v. Baltimore Post, 268 U.S. 388 (1925).
fixed by public authority and printed in official reports, the
worth of whose work is a regular subject of debate, who must
usually make heroic efforts to exhibit the inadequacy of their
incomes in order to secure tardy increases. Next march the
serried divisions of the employees of private industry who
receive their recompense in wages . . . . The hourly or weekly
rates paid . . . are published in official documents . . . . Last of all
march the multitude of farmers who . . . cannot count much on
secrecy when the yields and prices of their crops are so obvious.97

According to the New Republic, the existing law did not go far
enough. The newspaper maintained that very little could be learned
regarding tax evasion or actual incomes from records indicating only the
taxes paid by the individuals. The New Republic contended that the
only logical procedure was to publicize fully the tax returns themselves.
Arguing that the government had gone "far enough to cause irritation to
the taxpayer and the public," the newspaper asserted that it had failed
to go "far enough to reap the substantial benefits of candor."98

Supporters of the 1924 law declared that it would reveal the illegal
practices of tax evaders,99 apparently by drawing attention to
suspiciously low payments. The New York Times, however, carried front
page stories stating that income tax collectors felt the publication of
individual tax returns had no appreciable effect on tax administration.100
Yet the Times also published on its front page the names of wealthy and
prominent New Yorkers who paid no income tax, which presumably
would have led to inquiries by the tax administration.101 Other
editorials attacked the new law as unnecessary, arguing that most
persons are honest and, in any event, the government maintains a large
force of inspectors to check doubtful cases.

By 1924, the anti-disclosure rhetoric was predictable. Disclosure was
criticized as "flagrantly undemocratic, exposing to the general gaze the
affairs of only a small minority. It is petty, furnishing food for the
impudent curiosity of gossips and busybodies. It opens a door to business
fakers, offering them choice lists of moneyed 'prospects.'"102 Newspapers
heralded, "[p]artners are checking up on each other; husband and wife are on the fiscal trails of their mates, alimony hunters are running wild, and 'sucker lists' of the wealthy are being prepared by those who have something to sell. . . . Economically, the new policy will be costly; morally, it is indefensible; socially, it is deplorable. . . ."

In his annual message to Congress at the end of 1924, President Coolidge voiced his opposition to disclosure:

> Every one desires a reduction of taxes, and there is a great preponderance of sentiment in favor of taxation reform. When I approved the present tax law I stated publicly that I did so in spite of certain provisions which I believed unwise and harmful. One of the most glaring of these was the making public of the amounts assessed against different income tax payers. Although that damage has now been done, I believe its continuation to be detrimental to the public welfare and bound to decrease public revenues so that it ought to be repealed.  

Secretary of the Treasury Mellon expressed a similar sentiment:

> Publicity is wholly unnecessary from an administrative standpoint. Publicity serves one purpose, however. It gives to business rivals and to those having some ulterior motive information which is of value to them solely to the extent it is detrimental to the taxpayer. They gain by the taxpayer being hurt.

> It is difficult to imagine any one thing which would be a greater spur to the efforts of all taxpayers to avoid a taxable income than the threat that the amount they paid will be pilloried. To the direct monetary value of saving payment of an inherently high tax is added the incentive, in many cases much stronger, of preserving business privacy.

> Immediately upon the recent publication of this information opened to the public, the newspapers reported a stimulation in the market for tax-exempt securities. We may promptly expect renewed use of the many means of tax avoidance, with the

103. Uncle Sam Favors Paul Pry, THE INDEPENDENT, Nov. 8, 1924, at 353.  
consequent decrease in the productivity of the income tax. The provision should be repealed.\textsuperscript{105}

Consistent with Secretary Mellon's opposition, Treasury officials asserted that they were unable to point to a single case in which a tax dodger had been uncovered as a result of public disclosure. For example, in 1925, the Treasury reported over 13,000 persons had neglected to file a tax return—some of whom were bootleggers—and the names of these persons did not appear on the lists that were published.\textsuperscript{106} Treasury officials asserted that public disclosure had not had the effect of increasing revenue from delinquents; the data made available for publication were of no particular value; and disclosure was an added expense to the federal government for which there was no offsetting benefit.\textsuperscript{107}

In 1926, the vehement opposition of Secretary of the Treasury Mellon,\textsuperscript{108} representatives of big business,\textsuperscript{109} and then President Coolidge, led to a change in the law, requiring the posting only of taxpayer's names and addresses; not the amount of their liabilities.\textsuperscript{110} This change,

\textsuperscript{105} Id. at 2.
\textsuperscript{106} Id.
\textsuperscript{107} Id. at 1. According to the Treasury, "there is no excuse for the present publicity provisions except the gratification of idle curiosity and the filling of newspaper space." 
\textit{Revenue Revision, 1925: Hearings Before the House Ways and Means Comm.,} 69th Cong., 1st Sess. 8-9 (1925) [hereinafter Hearings].
\textsuperscript{108} The roots of Mellon's opposition may have been personal. He could not have been pleased when \textit{The New York Times} trumpeted that he paid $1,173,987 in income tax, the largest of any individual in the Pittsburgh district. The subheading of the same article went on to mention that his brother paid $348,646 and a nephew paid $225,834. \textit{Andrew W. Mellon Paid $1,173,987 Tax, N.Y. Times}, Oct. 25, 1924, at 2.
\textsuperscript{109} Hearings, supra note 107, at 65-66, 278-79, 280-83.
\textsuperscript{110} Act of Feb. 26, 1926, ch. 27, § 257(e), 44 Stat. 9, 52 ("The Commissioner shall as soon as practicable in each year cause to be prepared and made available to public inspection in such manner as he may determine, in the office of the collector in each internal-revenue district and in such other places as he may determine, lists containing the name and the post-office address of each person making an income-tax return in such district.").

As of 1926, the rules governing access by private individuals to non-corporate returns were as follows: Individual returns were open to inspection by the person who made the return, their duly constituted attorney in fact, a receiver in bankruptcy, guardian, or similar legal custodian. I.T. 2087, III-2 C. B. 328 (1924); \textit{In re Epstein}, 300 F. 407 (1924); S. M. 2353, III-2 C. B. 327 (1924); Reg. 74, Art. 422 (1928). If the maker of the return had died, the administrator, executor, or trustee of his or her estate was entitled to inspect the return. The Commissioner had the discretion to open the return to any heir at law or next of kin of a deceased

(continued)
intended to placate the champions of disclosure,\textsuperscript{111} essentially remained the law until 1966.\textsuperscript{112} According to one commentator, the change successfully prevented the "spotlight from being thrown in the future on the hierarchy of wealth which had come to dominate American society."\textsuperscript{113} The 1924 publicity provisions and the corresponding concern about the concentration of wealth motivated Senator Mellon and his associates "to safeguard their privileged positions by keeping from the person or to the duly constituted attorney in fact for such person upon a showing that the heir or kin had a material interest which may be affected by information contained in the return. Reg. 62, Art. 1090, ¶ 8 (c) (1922); Reg. 69, Art. 1090, ¶ 8 (b) (1926); Reg. 74, Art. 421 (1928). Either spouse filing a joint return had the privilege to inspect it; in the event of the death of either spouse, the inspection privilege was available to the survivor or the personal representative of the deceased or duly appointed attorney in fact of the survivor. The Commissioner had the discretion to allow any heir at law or next of kin of the deceased spouse to inspect the return upon a showing of a material interest in the return. S.M. 1992, III-2 C.B. 327 (1924). Similar rules applied in the case of partnership returns. Any member of a partnership during any part of the time covered by the return could inspect it as well as representatives or next of kin of a deceased partner provided they had a material interest affected by information in the return. Reg. 74; Art. 421 (1928); Reg. 74 Art. 1090 ¶ 7 (1928); Reg. 69 (1926); Reg. 65 (1924); Reg. 62 (1922). Tax returns filed by or on behalf of an estate were subject to inspection by the administrator, executor, or trustee of such estate and, in the Commissioner's discretion, by any heir at law or next of kin of the decedent or by an attorney in fact for such persons upon evidence of a material interest that may be affected by information contained in the return. Reg. 74, Art. 421; Reg. Art. 1090, ¶ 8 (1928); Reg. 69 (1926); Reg. 65 (1924); Reg. 62 (1922). In the case of trusts, the trustees, any individual who is a beneficiary of a trust during any part of the time covered by the return, administrators, executors, representatives of the estate of the deceased beneficiary of the trust or, in the discretion of the Commissioner, any heir at law or next of kin of such deceased beneficiary, also had access upon a showing of material interest which may be affected by information contained in the return. Reg. 74, Art. 421; Reg. 74 art. 1090, ¶ 9, Reg. 69, Reg. 65 (1924), Reg. 62 (1922). Regulations issued in 1931 expanded access to non-corporate tax returns by providing access by persons having a material interest in the taxpayer, for example, beneficiaries of estates and partners of a partnership. T.D. 4317, 1931-1 C.B. 146.

\textsuperscript{111} RATNER, supra note 16, at 427.

\textsuperscript{112} In 1966, the provision was changed to provide information only on whether a person had filed an income tax return. Act of Nov. 2, 1966, P.L. 89-713, § 4, 80 Stat. 1107, 1109 (current version at 26 U.S.C. § 6103 (1988 & Supp. III 1992)). The change was made because of the difficulty of making microfilm (which was the medium used to store the data) available to the public and because of the desire to keep Social Security numbers confidential. S. REP. No. 1625, 89th Cong., 2d Sess. 7-8 (1966).

\textsuperscript{113} RATNER, supra note 16, at 427-28.
public vital facts about the individuals who composed the high income elite."¹¹⁴

No further changes in the law occurred until 1934. The groundwork for the 1934 changes was laid by a well publicized scandal involving an income tax evasion that arose during consideration of the National Industrial Recovery Act ("NIRA"). Senator Robert LaFollette, Jr., who had inherited the cause of income tax disclosure from his father, declared that the intolerable amount of evasion and understatements of income that had been uncovered during a Senate investigation would never have arisen under a system of public disclosure.¹¹⁵ LaFollette seized this opportunity by proposing an amendment for full publicity, which sailed through the Senate on a 56-27 vote.¹¹⁶ The Conference Committee, however, which had been informed by Treasury experts that publicity would be administratively "cumbersome," left the issue of disclosure once again to the President's discretion.¹¹⁷ Progressives were infuriated, and joined en masse with Republicans to sink the NIRA Conference package.¹¹⁸

Progressives were keenly aware of the Treasury's opposition to publicity and were skeptical of President Franklin D. Roosevelt's inclination to use his discretionary power to broaden public access to tax returns. When the skepticism proved correct, the Senate attached LaFollette's full publicity amendment to the 1934 Revenue Bill.¹¹⁹ Although Congress refused to publicize the complete income tax return, it did authorize the so-called pink slip requirements.¹²⁰

¹¹⁹ 78 CONG. REC. 6554 (1934). LaFollette's proposal was adopted by a 41-34 vote.
¹²⁰ Revenue Act of May 10, 1934, ch. 277, § 55(b), 48 Stat. 680, 698 (1934). Apparently Congressman Wright Patman conceived the idea to use pink slips. S. REP. NO. 266, supra note 22, at 853 n. 54. Similar to the earlier votes on publicizing income tax data, voting on the pink slips was along urban-rural lines. Except in highly urbanized states, a substantial majority of Democrats and most Republicans favored publicity. Although only one Northeasterner supported LaFollette's amendments, Midwestern Senators strongly supported him. The South split almost evenly because Democratic Party stalwarts opposed the amendments. LEFF, supra note 83, at 68.
Each taxpayer was required to fill out a pink slip with his or her return, containing name and address, total gross income, total deductions, net income, total credits, and tax liability. These slips were made available for public inspection. The pink slip law also applied to corporations and partnerships.\textsuperscript{121}

Passed during the depths of the Depression, pink slip supporters played on the popular resentment toward the rich.\textsuperscript{122} Advocates thought

\end{itemize}

\textsuperscript{121} Publicity for Incomes, NEW REPUBLIC, Jan. 22, 1936, at 299.
\textsuperscript{122} The pink slip provision was consistent with the New Deal's concern over the level of corporate salaries. During the Depression, corporate executives were viewed by some as an "extraneous, unproductive layer that soaked up an extravagant share of the shrunken consumer dollar. The widely bruited gap between a corporation's dispersed ownership and its actual control cast corporate directors as a specially privileged, self-regulating group that selfishly hoarded outrageous salaries and bonuses." LEFF, supra note 83, at 74. Themes of sacrifice, fraud, frugality, and stockholder rights animated discussions over whether executive salaries should be limited. The compromise was to require corporations to include with their tax returns a list of names and total compensation of employees earning more than $15,000. The Treasury submitted to Congress a cumulative list, which was then made public. \textit{Id.} at 77. Not surprisingly, the disclosure of salaries was also controversial:

We are told that because of this publicity these individuals will become the prey of racketeers, kidnappers and cranks. In considering the merits of such criticism it is well to bear in mind that in the past, the wealthy have been, broadly speaking, the only element in the community exempt from such information. The wages paid to workers in industry are nearly always a matter of public record. College professors' salaries are known, and are frequently printed in the catalogues. Employees of the federal government and of most of the states and cities receive stipends that are officially recorded. The American temperament being what it is, the income of almost anyone can be estimated within broad limits, from the scale on which he lives.

Making public the salaries paid by corporations performs a distinct public service; for example, the facts can be checked against the wages paid by the same corporation and against the customary plea of poverty when the workers ask an increase in those wages. As for the danger from racketeers and kidnappers, the first point to make is that these gentry do not need to wait for a government publication to help them select their potential victims; and in the second place, the answer in the long run is for the government to fight the underworld directly, and not by withholding possibly useful data.

\textit{Publicity For Incomes, NEW REPUBLIC, Jan. 22, 1936, at 299.}

Opponents of this salary disclosure failed to piggyback repeal of this provision onto the repeal of the pink slips, but in 1938 they succeeded in

\textsuperscript{(continued)}
disclosure would deter tax evasion and claimed tax payments by the wealthy would increase vastly once publicity incited public indignation. Proponents espoused that "[p]ublicity is the greatest cure for evils which may exist in government."123 If someone "knows that his return is a matter of public record, he will hesitate a long time before he will resort to any device designed to relieve him of his fair share of the tax."124

Supporters presented another rationale for disclosure, maintaining that "loopholes will be discovered immediately and legislation passed to correct evasions."125 Those advocating disclosure doubted the impartiality of employees of the Internal Revenue Bureau (the predecessor of the IRS) and argued that disclosure would keep tax administrators honest.126

Opposition to the pink slips was fierce and immediate:

A group calling itself the "Sentinels of the Republic" mobilized the push for repeal before anyone would actually have to submit the tell-tale pink slips. Its race with the March 15, 1935, filing deadline stirred wide press and popular support, for this time the question of access to tax returns loomed as a matter of life and death: The 1932 Lindbergh kidnap gripped the public consciousness.127

The Sentinels were successful in laying the foundation for an enormous taxpayer protest. The group developed special pink slip packets which furnished the taxpayers with propaganda papers and a petition to mail to their Congressman. The packet urged its recipients to contact the Secretary of State, their Congressman, and their local newspapers. As the Treasury sent out the pink slips and the filing date for income taxes approached, an avalanche of telegrams and letters, many of them identical, sent by incensed taxpayers arrived at Congress' doorstep. Additionally, many people fastened to their pink slips a sticker that they had obtained from the Sentinels' special packet, declaring, "I protest against this outrageous invasion of my right of Privacy."128 This orchestrated protest apparently impressed Congressmen, who often increasing the $15,000 level to $75,000. It was not until 1949, when the Treasury testified that it considered the extraction of 1,000 names from 600,000 returns a waste of time, that the salary provision quietly died. LEFF, supra note 83, at 80.

commented that the majority of the dissension came from "the small taxpayers."  

Protesters and supporters of the pink slip system rallied to the cause. Those who objected to the campaign came out in force, raising the familiar arguments that the only people who would benefit from the public disclosure would be business competitors, racketeers, blackmailers, kidnappers, and those who possessed a malicious sense of curiosity. 

Dissenters also feared the effect of the pink slips on social harmony as well as the potential embarrassment, distress, and humiliation that might be imposed upon the small taxpayer. 

The disclosure movement had been "boiled in the cooking pots of demagogues whose ulterior motives [had not been] the public interest, but class cleavage and the creation of class hatreds." 

Neither side had a monopoly on the hyperbole. Supporters of the pink slip movement claimed that the opponents of disclosure simply feared a public display of information showing how well they had fared under the New Deal. Businessmen, manufacturers and others, the supporters alleged, had accrued tremendous profits under the New Deal legislation, and it was they who would lose face by opening their returns up to the public scrutiny. 

One supporter of the pink slips, for example, argued for "pitiless publicity ... thrown upon the incomes of the rich, the superrich, and the idle rich," especially the "burglars of wealth, idle holders of idle capital, lounge lizards of the blue-blooded, and pink-toed aristocracy of wealth." 

The pink slip rebellion basically concerned individual returns and not corporate returns. Even when corporations were specifically mentioned, it was the "mom and pop" operations:

One of the most serious abuses that will be brought about by this section is the publication of business information to a man's competitor, and I am not at this moment thinking of large business or industry ... but the smaller business men in the cities, and the small merchants in the towns of the country.

134. Id. at 3392-93.
135. Return Confidentiality, supra note 15, at 84 (speech of Mr. Bacon).
Representative Bacon wrote in a letter to the Chairman of the Committee on Ways and Means: "I do not think I need to give a summation of the reasons in opposition to the 'pink slip' section. However, I will say that most of the complaints I have received have been from people of modest means, small business men and the salaried or wage classes."\textsuperscript{136} The House Ways and Means Committee Report\textsuperscript{137} on the question of repealing the disclosure feature referred to the previous unsuccessful attempts at publicity without differentiating between the corporate and individual returns, or between big and small businesses. Instead the report focused almost solely on individuals.

The uproar over the pink slip provisions led to their repeal in 1935 before ever taking legal effect.\textsuperscript{138} The House Report recommending repeal argued that disclosure was unnecessary:

> [A]mple authority is contained in other sections of existing law authorizing the inspection of income-tax returns by the committees of Congress charged with the responsibility of levying taxation . . . [P]ublication . . . will be of slight benefit to the Treasury in the prevention of tax evasion, which is the main argument advanced for such publicity. The real remedy . . . is careful auditing of returns and the swift imposing of penalties for such evasion.\textsuperscript{139}

In addition, Congress cited unfavorably the experience of Wisconsin, the only state that had a disclosure law at that time.\textsuperscript{140} The House Report quoted from a report by the Wisconsin Tax Commission which stated that the disclosure provisions had been introduced in 1923 but that none of the asserted benefits had yet materialized. According to the Wisconsin report, the published returns were used by credit companies,

\textsuperscript{136} Letter from Representative Bacon to the Chairman of the House Ways & Means Committee (Feb. 14, 1935), \textit{quoted in Return Confidentiality}, supra note 15, at 62.

\textsuperscript{138} Act of Apr. 19, 1935, ch. 74, 49 Stat. 158 (1935). \textit{The Saturday Evening Post} described the repeal as scrapping "what promised to be a card-index system available to every kidnaper, blackmailer, blue-sky security salesmen, town gossip, gold digger, alimony hunter or other exploiter on the prowl for victims." \textit{The Pink-Slip Strike As Told by Raymond Pitcairn}, SATURDAY EVENING POST, June 8, 1935, at 23.

\textsuperscript{139} H. R. REP. NO. 313, supra note 137, at 1.

\textsuperscript{140} LaFollette is given credit for Wisconsin's law by \textit{Uncle Sam Favors Paul Pry}, \textit{The Independent}, Nov. 8, 1924, at 353.
The Wisconsin report indicated that disclosure had not resulted in the discovery of unreported income and claimed that it had actually led to more filing of incorrect returns. No explanation was provided why the number of incorrect returns should have increased or if they did, why that increase should have been attributed to disclosure.

The repeal of the pink slip provisions could be explained in part by Congressional self-interest. One Congressman, recalling the country's earlier experience with disclosure, reminded his colleagues that, "when the first income-tax payments were made public . . . the names of the Congressmen were the first ones most eagerly published and scanned." One commentator gave credit for the repeal to the ability of the anti-publicity forces to characterize themselves as defending the middle-class. Opponents of the pink slip movement would, for example, emphasize how embarrassed an unsuccessful businessmen would be at seeing his or her business affairs laid out on the local front page. The specter was raised of creditors cutting off the flow of funds. The Sentinels of the Republic also used small-business imagery that obscured their dependence on wealthy conservatives.

Although the sentiment against the pink slips was strong, repeal of disclosure was not a sure thing. As late as February 1935, there was actually very little hope for repeal. Subsequently, the repeal forces quickly and effectively began to assemble a formidable coalition of merchants' associations, chambers of commerce, and other business groups. The Bureau of Internal Revenue and other Treasury officials also supported repeal. Although Secretary of the Treasury Morgenthau refused to endorse repeal, the Treasury was anything but neutral. In addition, Roosevelt's apparent caution, conservatism, and drift in early 1935 made the disclosure law vulnerable. As the tide turned in favor of repeal, a last-ditch amendment in the House to confine publicity to people earning over $25,000 a year was easily defeated. Remarkably, only one month after the pundits had discounted the chances of repeal, it swept through Congress.

144. LEFF, supra note 83, at 72.
145. Id.
146. Id.
147. 74 CONG. REC. 2305 (1935).
148. The vote in the House was 301-99. Republicans, who by 1935 enjoyed extraordinary cohesion, voted almost unanimously for repeal. All third-party Congressmen voted for disclosure, but "rural Democrats split slightly against it and Southern Democrats—whose innate conservatism often surfaced when
The pink slip proposal was the last time Congress debated the issue of access to tax information by the general public.149 Similar to most of the earlier debates, the focus was on individuals and to a lesser extent, on small corporations. The lobbying effort (as exemplified by the Sentinels of the Republic), the appeal made to the public (invoking the fear of kidnapping, criminal extortion, constant solicitation), the pressure put on Congress (as Representative Bacon put it, coming mostly from those of "modest means"), the House Report, and the debate in Congress, all centered on the concerns of individuals and of small corporations. No attempt was made to distinguish those concerns from those of publicly-traded corporations.

The 1910 law remained in effect until 1976. Federal law delegated the authority to the Executive branch to open tax returns for inspection upon order of the President and under rules prescribed by the Secretary of the Treasury and approved by the President. Debate over this provision shifted to governmental access to tax returns by agencies other than the IRS. This debate was marked by a dizzying sequence of policy flips and turns,150 with unelected administrators in the Executive branch exercising enormous power. "[T]he story is one of the exercise of discretion granted by a Congress unwilling to define precisely the policy to be followed,"151 concluded a 1975 report to the Senate. The Tax Reform Act of 1976152 ended the Executive branch's discretion. In the aftermath of the abuses of Watergate,153 Congress announced the general rule that "[r]eturns and party loyalty was not involved"—voted for repeal by a margin of almost two to one. LEFF, supra note 83, at 72; 74 CONG. REC. 2305 (1935). The division in the Senate was somewhat similar, except that Republicans from farm states divided evenly. No Northeasterners voted against repeal, which is not surprising because none had voted in favor of the pink slips. More striking was the erosion of support from rural conservative Democrats.

149. Access to tax returns by the non-public continued to absorb the attention of Congress. In 1936, for example, Congress permitted the inspection of individual, in addition to corporate income tax returns, by state and local tax administrators. Tax Act of 1936, Subtitle A, ch. 1, pt. V, § 55 (b)(1), 49 Stat. 158; see I.R.C. § 6103(b)(1). Previously, only corporate returns were available for inspection.

150. For an excellent history on the various administrative guidelines on disclosure, see S. REP. NO. 266, supra note 22, at 844-53.

return information shall be confidential,\textsuperscript{154} except as otherwise authorized.

G. Securities and Exchange Commission Disclosure: 1933-Present

In the late 1920's and early 1930's, increasing attention was focused on the financial reporting practices of large corporations. In a series of articles in the \textit{Atlantic Monthly} and then in his influential book, \textit{Main Street and Wall Street}, Harvard economist William Z. Ripley accused large corporations of deceptive and misleading financial reporting.\textsuperscript{155} Following the stock market crash of 1929, which led to an "outcry for full disclosure in all matters corporate and financial,"\textsuperscript{156} the American Institute of Accountants and the New York Stock Exchange began working together to improve corporate financial reporting. In 1933, the New York Stock Exchange for the first time threatened a listed company, with delisting unless it improved its financial disclosures.\textsuperscript{157} In the same year, the Securities Act of 1933 was enacted,\textsuperscript{158} which required "full and fair disclosure" in the prospectuses that accompany the interstate issuance of securities.\textsuperscript{159} This was immediately followed by the Securities Exchange Act of 1934,\textsuperscript{160} which created the Securities and Exchange Commission ("SEC") to administer both the 1933 and 1934 Acts. The 1934 Act also required the filing of periodic reports by companies whose securities were listed on the national exchanges.
One of the SEC's primary functions was to regulate disclosure and measurement standards, based largely upon the belief that the securities markets' failure of the 1930's resulted from inadequate disclosure and an excessive number of measurement methods used by public companies. For this reason, the Securities Act of 1933 is often referred to as the "truth in securities law."

The SEC has through the years mandated extensive disclosure of income tax data both through its own regulations on this issue and by its requirement that SEC-regulated corporations must follow generally accepted accounting practices ("GAAP"), as established by the appropriate accounting bodies. Other countries have adopted similar rules.

161. Measurement standards refer to the methods by which assets, liabilities, ownership and profit and loss are disclosed. BERTRAND HORWITZ & RICHARD K. KOLODNY, FINANCIAL REPORTING RULES AND CORPORATE DECISIONS: A STUDY OF PUBLIC POLICY 10 (1982).
162. Id. at 10.
163. Id.
164. In 1938, the SEC issued Accounting Series Release ("ASR") 4, in which it stated that financial statements filed pursuant to its rules and regulations that were prepared in accordance with accounting practices for which there was no substantial authoritative support were presumed to be misleading, and that footnotes or other disclosures would not rebut this presumption. The American Institute of Certified Public Accountants ("AICPA"), formerly the American Institute of Accountants ("AIA"), established a Committee on Accounting Procedure ("CAP"), which began to issue accounting research bulletins in 1939. The authority of these bulletins was ambiguous because the CAP stated that the force of its opinions "rested upon their general acceptability." HORWITZ & KOLODNY, supra note 161, at 11, 12.

The progress of the CAP was disappointingly slow and the AICPA then established the Accounting Principles Board ("APB") in 1959. The APB was supposed to formulate GAAP. The APB, however, was also criticized for its slowness, as well as for the poor quality of its opinions. The credibility of the APB was weakened at an early stage in its history when the SEC refused to accept one of its opinions and forced the Board to reverse itself. Id. at 12, 13. As a result, the APB was replaced with the Financial Accounting Standards Board ("FASB") in 1973. The FASB received a vote of confidence from the SEC in the same year in ASR 150. In ASR 150, the SEC stated that the principles, standards and practices promulgated by the FASB in its Statements and Interpretations will be considered as having substantial authoritative support, and contrary practices will be considered to have no such support. Id. at 13, 14. As the SEC said seven years later in ASR 280, "while there is, of course, always the possibility that the Commission may conclude it cannot accept an FASB standard in a particular area, such events have been rare." ASR 280 at 9.

165. All of the Organization for Economic Co-Operation and Development ("OECD") countries (the Western democracies and Japan), and many other (continued)
industrial and industrializing nations, have financial disclosure requirements as part of SEC-type regulatory frameworks. Such countries also have their own versions of generally accepted accounting principles as well as authoritative standard setting bodies such as FASB in the United States.

In the United Kingdom, for example, the Stock Exchange plays an extremely important role with respect to disclosure requirements. France (Commission des Operations de Bourse), Italy (Commission Nazionale per le Societa e la Borsa) and Mexico (Comision Nacional de Valores) have a national commission, similar to the U.S. format, that enforces their securities laws. Japan has a Securities Bureau. In Canada, each province and territory has its own securities laws enforced by a local administrator. Australia has a National Companies and Securities Commission. In the Netherlands and Germany the stock exchanges are almost the exclusive source of securities regulation. HAROLD BLOOMENTHAL, INTERNATIONAL CAPITAL MARKETS AND SECURITIES REGULATION § 1.08[3] (1982). For a detailed description of the elaborate Japanese rules, see LOUIS LOSS ET AL, JAPANESE SECURITIES REGULATION (1983). Corporations are required to disclose a variety of financial data in these countries. For a description of the disclosure rules in various countries, see BLOOMENTHAL, supra. In 1988, the OECD set forth a list of financial information, including income taxes, that should be disclosed in the published reports of multinational enterprises. OECD, MULTINATIONAL ENTERPRISES AND DISCLOSURE OF INFORMATION: CLARIFICATION OF THE OECD GUIDELINES (1988). Financial reporting requirements, including the disclosure of income tax expenses, are also being examined on a comparative, cross national basis by two other important international organizations: the International Accounting Standards Committee and the International Organization of Securities Commissions.

In addition to the disclosure of income tax information resulting from securities laws and accounting standards, several countries have additional forms of disclosure related to their customs and traditions. In Japan, for example, the national government publishes lists of companies that pay the largest amounts of taxes. Apparently most major firms want to be mentioned. Pressure to Reduce U.S. Budget Deficit Seen Working Against Foreign Tax Credits, Daily Tax Rep. (BNA) No. 225, at G-3 (Nov. 24, 1987).

Under the Swedish Freedom of the Press Act, the amount of corporate income taxes paid is a matter of public record, available for public examination at the tax administration. Telephone interview with Lars Hollner, Swedish Embassy, Washington, D.C. (Sept. 17, 1993). Since 1914, the Taxeringskalender, a private publication, lists gross and taxable income for every Swedish citizen who qualifies. In 1985, for example, the edition for the Stockholm area included every individual who made more than $15,000 a year and every couple who made $20,000 or more. Forbes, Feb. 25, 1985, at 130. (The Forbes article does not clarify whether the amounts refer to gross income or taxable income.) Anybody with $63,000 or more in assets also made the list. In 1975, the publishers of Taxeringskalender started breaking down the list on a county-by-county basis, like telephone directories. Id. "It turns out the Swedes are such busybodies that the government doesn't need to offer a bounty for ratting on delinquent taxpayers, as the IRS does. In Sweden this happens anyway. Says a Swedish
Taxes have been included as a significant item of expense in the financial statements of most large corporations, at least since the post-Depression era. There has long been a consensus that income taxes should be disclosed. More controversial has been the treatment of interperiod allocations; that is, how to treat the tax implications of differences in the timing of the recognition of income for book and tax purposes. Although these technical rules have continued to be refined, neither the SEC nor the authoritative accounting standards bodies have ever found the arguments against disclosure of income taxes persuasive.

In 1973, the SEC adopted the current rules on the disclosure of income taxes. The 1973 arguments made by opponents of the SEC's position were similar to those that have been raised during the current debates regarding state-level disclosure, and thus merit mention. In response to comments that the 1973 proposals would violate the confidentiality of federal income tax information and provide valuable data to competitors, the SEC observed that the full and fair disclosure of material information is a basic part of the Securities Act of 1933 and the Securities Act of 1934. Each Act provides that registration statements must contain, in addition to other information specified, such information "as the Commission may by rules or regulations require, as necessary or appropriate in the public interest or for the protection of investors." The SEC believed that its 1973 rules were consistent with this authority. The SEC also noted that opponents did not provide any specific examples of how the detailed reporting of income taxes would help competitors. In any event, it concluded that the needs of present and potential investors were best served by providing such information, notwithstanding the possibility of an increased risk of adverse consequences at the hands of competitors.

The 1973 changes, requiring detailed information on federal income taxes and aggregate data on state income taxes, is part of a panoply of financial data that the SEC requires to be disclosed. Such information is presented on Form 10-K, which publicly-traded corporations must annually file with the Securities and Exchange Commission. The 10-

official, 'Sometimes a jealous neighbor will call tax officials and say, Please look into my neighbor, who has just bought a new Mercedes-Benz.' They call that the royal Swedish envy." Id.

Tax liabilities are also public information in Norway and are published by the newspapers. Telephone interview with the Finance Officer, Norwegian Embassy (Nov. 2, 1993).

166. Accounting Series Release 149 (Nov. 28, 1973). For a detailed description, see infra note 272 and accompanying text.

168. LOUIS LOSS & JOEL SELIGMAN, SECURITIES REGULATION 1856-57 (1990). For detailed background information, see BNA, ANNUAL REPORTING UNDER THE (continued)
K must be sent to stockholders of record or beneficial owners on request without charge. Some corporations also make it available to the public on request. It is also accessible on the SEC's electronic data gathering analysis and retrieval system ("EDGAR"), as well as through commonly used computer data bases such as LEXIS and Compustat. EDGAR will soon be available on Internet.

H. Citizens for Tax Justice and the Use of SEC-Required Disclosure for Policy Analysis

170. SEC Rule 14a-3(b)(9). Corporations are required to file numerous other reports with the SEC. See Loss & Seligman, supra note 168, at 1854-1916.

171. On Line, The Chronicle of Higher Education, Nov. 3, 1993, at A21. Form 10-K consists of four general parts, only one of which deals with federal income taxes. The first part compels detailed disclosures relating to business, properties, legal proceedings and submission of matters to a vote of security holders. The second part consists of market price data for the company's common stock, a summary of financial data appropriate for trend analysis, three years of audited financial statements and management's discussion and analysis of the issuer's financial condition. The third part consists of the traditional proxy disclosure information relating to directors and executive officers, executive compensation, beneficial ownership of securities and certain relationships and related transactions. The fourth section contains required financial statements.

Regulation S-X governs the form and content (not the accounting standards) of financial statements. This regulation was first adopted in the 1940's. The most recent general revision occurred in 1980. Between 1937 and 1982, the SEC published 307 Accounting Series Releases. The more important releases were codified in Codification of Fin. Rep. Policies, 6 Fed. L. Rep. (CCH) ¶ 72, 901. Since 1975, the SEC has published Staff Accounting Bulletins.

172. This description of CTJ's work is based on the following CTJ publications and reports: Citizens for Tax Justice, It's Working, But . . . (1989); Citizens for Tax Justice, The Corporate Tax Comeback (1988); Citizens for Tax Justice, 130 Reasons Why We Need Tax Reform (1986); Citizens for Tax Justice, Money for Nothing (1986) [hereinafter Money for Nothing]; Citizens for Tax (continued)
reports in the 1980s, CTJ was able to demonstrate that many of the most profitable corporations in the United States were paying little or no corporate income tax. Incredibly, some companies were receiving subsidies from the federal government in the form of tax rebates while making billions of dollars in profits. Thus, some companies actually had negative tax rates.

CTJ found that the federal corporate income tax policies of the early 1980's—intended to stimulate investment—had become a device for corporations to "shelter" income in misplaced investments and considerably reduce or eliminate their tax liability. In fact, in a report issued just before the 1986 Tax Reform Act, CTJ found that more than half of the 250 most profitable corporations in the United States that had been surveyed enjoyed at least one federal tax-free year between 1981 and 1985.

For example, CTJ found that Boeing corporation made close to $3 billion in profits from 1981 to 1985 and received rebates totaling more than $245 million from the government, a net tax rate over those years of negative 8.3 percent. Likewise, the federal government gave Dow Chemical Corporation rebates over that period totaling $200 million on $771 million in profits, a negative 25.9 percent rate.

Many of the provisions that gave these companies such large tax benefits had been adopted in the name of economic growth. But a detailed analysis of forty-one companies that paid no federal income tax at all from 1981 to 1984 found that they reduced their aggregate capital spending by four percent and cut their total number of employees by six percent over the same period. Yet these corporations received those huge tax breaks ostensibly to encourage growth in capital spending and job creation. In contrast, forty-three of the highest-taxed companies in CTJ's 1981-84 analysis boosted their capital spending by twenty-one percent and incurred a four percent growth in their workforce.\footnote{173}

Another flaw in the federal corporate income tax revealed by CTJ was the unequal treatment of direct competitors. A 1984 study, for example, revealed that General Electric obtained $283 million in tax rebates while earning profits of $6.5 billion in 1981-83. At the other end of the spectrum, one of the highest taxed corporations in the survey also was a major manufacturer of appliances, Whirlpool, which paid 45.6 percent of its profits in federal income taxes. Thus, direct competitors had very different after-tax rates of return because of the tax code.

The publication of this type of information by CTJ had a staggering impact. Although information on the aggregate decline and disparities

\footnote{173. \textit{Money For Nothing}, \textit{supra} note 172, at 3.}
in federal corporate income taxes had been available previously, none of it had the force of CTJ's documentation. When the CTJ studies were published, both conservatives and liberals were outraged. Conservative columnist James Kilpatrick, for example, complained to Senator Robert Byrd on national television about corporate welfare. He noted that a mother of three, who earned $12,000 a year, paid more in taxes than Boeing, General Electric ("GE"), DuPont, and Texaco, combined.

Largely because of this public outrage, and the very real policy problems exposed by CTJ's work, federal tax reform in 1986 included a strengthened alternative minimum tax. Other significant changes repealed the investment tax credit, tightened the "completed contract accounting rules" that had eliminated taxes for defense contractors, and restricted other corporate tax shelters. Because of the added revenue from these changes, Congress and the President were able to reduce the top corporate income tax rate from forty-six percent to thirty-four percent and still increase the revenue from the corporate income tax substantially.

By 1988, only seven of the 250 corporations that CTJ had earlier surveyed were now able to avoid federal income taxes entirely. Only forty-five companies were able to bring their effective tax rate below ten percent. In contrast, 113 of these same companies had paid less than ten percent of their profits in taxes over the full 1981-1985 period. All but two of the forty-one corporations that paid no tax at all over the 1981 to 1985 period were forced to pay at least some federal income tax in 1988. The combined tax rate for these forty-one companies, which was a negative 4.3 percent from 1981 to 1985, increased to 27.9 percent of their profits in 1988. In addition, tax reform brought a more level playing field for GE and Whirlpool. In 1988, GE paid twenty-one percent of its profits in taxes; Whirlpool paid twenty-seven percent. The gap between their effective tax rates narrowed from fifty percentage points to only six.

Although opponents of tax reform argued that business investment would decline as a result of changes in the corporate tax structure and predicted imminent economic collapse, just the opposite occurred. Actually, business investment surged strongly. Real business investment in industrial equipment, which rose by a minuscule 0.1 percent annually from 1981 to 1986 (the years when corporate incentives for investment were greatest), increased by an annual 4.0 percent during the three years following the 1986 changes. From 1986 to 1989, real business fixed investment grew at an annual rate of 2.7 percent, appreciably more than the 1.9 percent rate of growth over the previous five years.
I. Summary

Since the repeal of the pink slip provisions in 1934, Congress has not revisited the issue of public access to federal tax returns. The semi-hysterical atmosphere in which the pink slips were debated proved to be the death knell for public access to both individual and corporate tax returns. In a sense, subsequent events have reduced the need for public access to federal corporate income tax returns. The SEC has essentially preempted the issue by mandating the disclosure of extensive data by publicly-traded corporations.\footnote{174} Because of the cornucopia of data already available in the public domain, it is easy to see why no further debate at the federal level about public access to corporate returns has occurred. The nation's increased concern for individuals' rights to privacy also makes it easy to understand why no post-1934 debate over access to individual tax returns has taken place. In 1993, it is unthinkable for proposals like the pink slip returns for individuals to be taken seriously.\footnote{175}

The history of disclosure at the federal level indicates that, on the occasions when Congress focused on the differences between corporations and individuals, it tended to opt for more disclosure in the case of corporations. Even today, the fact that a one-percent shareholder can inspect the tax return of his or her corporation (although a shareholder cannot disclose anything obtained from the inspection),\footnote{176} indicates that corporations are treated as having less legitimate claims to privacy than individuals.\footnote{177} What is surprising from a review of the history of the federal debate is the inordinate amount of attention that the Progressives placed on obtaining the income tax returns of individuals to the neglect of corporations. If the Progressives and other supporters of disclosure had more carefully distinguished between corporations and individuals and proposed separate and independent laws governing access to the tax returns of each, they might have been more successful in protecting the victory they won in 1924 and perhaps salvaged the pink slip system for corporations. No one apparently on either side of the debate went to great lengths to differentiate the issues involved in

\footnote{174. See supra part G.}
\footnote{175. For a limited proposal, however, calling for the disclosure of the tax returns of millionaires, see Marc Linder, Tax Glasnost for Millionaires: Peeking Behind the Veil of Ignorance Along the Publicity-Privacy Continuum, 18 N.Y.U. REV. OF L. & SOC. CHANGE 951 (1991).}
\footnote{176. This same provision exists in Puerto Rico and the Virgin Islands. See P.R. LAWS ANN. tit. 13, § 3055 (1989); V.I. CODE ANN. tit. 33, § 822 (1992).}
\footnote{177. See infra parts III.F.; IV.A.
corporate disclosure from that of access to individual returns. Having chosen to pitch their battle over access to individual returns, supporters of disclosure gave up an opportunity to achieve corporate disclosure. But as was seen above, Senator LaFollette and the Progressives, as well as other early advocates of disclosure, were eventually vindicated over the last sixty years by the SEC's actions.

The CTJ's use of SEC-mandated disclosure to transform the inaccessible and arcane world of corporate taxation into a cornerstone of the 1986 Tax Reform Act has not been lost on state tax reformers. With the SEC effectively resolving the issue of federal tax disclosure, debate has shifted to the state level and to the disclosure of state corporate income taxes. This debate has been fueled by revelations that large numbers of profitable corporations pay only a minimum state income tax. For example, until New York's major corporate tax reform in the late 1980's, many of that State's largest and most profitable corporations—some having New York sales in excess of $1 billion and New York property in excess of $2 billion—paid the minimum $250 tax. These statistics have led to efforts to learn more about the workings of state corporate income taxes, but these attempts have been stymied by the inability to correlate data with specific corporations.

II. DISCLOSURE AT THE STATE LEVEL

Effective use of the federal disclosure laws in the mid-1980's motivated state legislators and tax reformers to consider similar laws at the state level. Their interest was heightened by increasing concern about state budget shortfalls, brought about by a number of factors, including reductions in federal aid, the recession, and statutorily-mandated limitations on revenue-raising at the local or state levels. In addition, several states adopted an array of corporate tax credits and other tax incentives in an effort to stimulate their recession-plagued economies.

In light of the need for new revenues, questions were raised about whether corporations were paying their "fair share" of the cost of public services. Specifically, the adoption of new corporate tax incentives in the face of looming deficits raised serious concerns about whether these expenditures were achieving their intended goals. It soon became obvious that none of these questions could be answered without more information about how much particular, large businesses were paying in state taxes.

At the state level, only Wisconsin has had a long history of income tax disclosure. Until recently, its law went unnoticed by other states.

Perhaps this neglect was understandable because only lately have Wisconsin tax reformers used the disclosure law effectively. Three other states have adopted disclosure laws within the past few years, Massachusetts being the most controversial. This portion of the article reviews these experiences with disclosure.

A. Massachusetts

In 1992, due to the efforts of the Tax Equity Alliance for Massachusetts ("TEAM"), Massachusetts voters approved a ballot question calling for extensive corporate tax disclosure. The law applied to all publicly-traded corporations, all banks, and virtually all insurance companies, doing business in Massachusetts. These corporations were required to file annual reports with the Secretary of State, listing specific items from their state excise (income) tax returns, which would upon request be available for public inspection.

The ballot question called for disclosure of a panoply of information. A company could request permission to attach additional information. Entities filing a consolidated return had to list all the entities that were consolidated.

A coalition of business groups aggressively opposed the ballot question. Two months before successful passage of the ballot question, TEAM, the business community, and legislative leaders reached a political compromise and agreed to adopt a less extensive form of disclosure that would take effect at the end of 1993, regardless of the outcome of the ballot vote. This compromise was adopted by the

179. MASS. GEN. L. ch. 62C, § 12A (1992). Among the data designated for disclosure are: gross profit; taxable Massachusetts tangible property; taxable net worth; gross receipts or sales; net income; total net taxable income; income subject to apportionment; income taxable in Massachusetts; total net and gross direct premiums in or allocable to Massachusetts; taxable premiums; gross investment income; Massachusetts taxable investment income; net underwriting profit; admitted assets; total adjusted taxable income; each deduction, exemption, credit, offset, adjustment, or credit to carry over that reduces income subject to taxation or otherwise affects tax liability; the percentage used, if any, to establish what portion of total net taxable income is apportioned to Massachusetts; total Massachusetts excise or tax due; any excess tax credits or credits subject to carryover to future years; and net income according to a company's books on its federal return.

180. Id.

181. The compromise was intended to avoid a "divisive confrontation" that "would inflict severe, long-run damage." MASSACHUSETTS SPECIAL COMMISSION ON BUSINESS TAX POLICY, MAJORITY REPORT 5 (1993) [hereinafter MAJORITY REPORT].
legislature and signed by Governor Weld. As part of this compromise, a Special Commission on Business Tax Policy was created to study Massachusetts business taxes.\textsuperscript{182}

182. The Commission was charged \textit{inter alia} with the responsibility of "making an investigation and study relative to the business tax policy of [Massachusetts] including, but not limited to, business tax disclosure . . . in the context of the goals of equity, neutrality, simplicity, tax competitiveness, confidentiality, and the public's right to know." Act of 1992, ch. 218, § 3. As part of that study, a report on disclosure was prepared by the staff of the Commission. \textit{See Massachusetts Special Commission on Business Tax Policy, Corporate Tax Disclosure: Good or Bad for the Commonwealth?, Draft Working Paper (1993) [hereinafter Massachusetts Staff Draft]; see also} Robert P. Strauss, \textit{State Disclosure of Tax Return Information: Taxpayer Privacy vs. The Public's Right to Know}, July 1, 1993.

The Staff of the Commission also issued a paper concluding that the Massachusetts tax structure was relatively neutral and equitable. \textit{See Yolanda K. Kodrzycki, Massachusetts Special Commission on Business Tax Policy, Corporate Taxation in Massachusetts: How Level Is the Playing Field?} This issue is independent of the disclosure issue; nonetheless, there was an attempt to confuse the two by opponents of disclosure. They argued, based on the Staff's paper, that disclosure was not needed because there were no major problems with the State's tax structure. \textit{See} Michael Zuckoff, \textit{State Tax System: No Roadblock,} \textit{Boston Globe,} Apr. 5, 1993, at 21. The Commission's Majority Report also cited that study for the proposition that "the corporate excise tax is reasonably equitable and neutral," which it then used as further evidence against disclosure. \textit{See Majority Report, supra} note 181, at 10. The actual study, however, conceded, that "state and federal laws prohibit members of the public from seeing tax returns or any tax return data that could lead to identification of specific taxpayers. Therefore, this study cannot address whether a particular corporation paid its 'fair share' of taxes." \textit{Massachusetts Staff Draft, supra,} at 2.

The study was strongly criticized by supporters of disclosure on numerous grounds. The study's conclusion that most of the companies that paid the minimum tax had low profits was attacked because the report was based on 1990—a recession year when many companies paying the minimum tax may have legitimately had low profits. The more relevant question is whether companies with large profits paid low state taxes, similar to the situation that existed at the federal level prior to 1986.

The study was also attacked for using a defective measure of profits, and for basing one of its effective tax rate calculations on taxable income after apportionment, which ignores defects or weaknesses in the apportionment factor. Because the report worked with aggregate data based on a sample, another problem was the inability to identify outliers. By using aggregates, any skewed distribution of credits could not be easily identified. In addition, the sample included corporations with the 250 largest tax bills, not corporations that were "large" using some other criteria (e.g., sales, payroll, property, book income,
Although the same taxpayers are subject to the law that was actually enacted, the amount of information subject to disclosure was reduced. Specifically, businesses are currently required to disclose the following:

1. name;
2. address of principal office;
3. Massachusetts taxable income;
4. total Massachusetts excise tax due;
5. non-income excise tax due;
6. gross receipts or sales;
7. either gross profit or credit carry overs to future years;
8. income subject to apportionment.\(^{183}\)

Corporations filing a combined return must report the names and addresses of all the corporations that are combined. The Secretary of State must make available a list of all taxpayers that are subject to disclosure. The first reports under this law are due December 31, 1993, based on the taxpayer's most recently filed Massachusetts tax return.

The enacted bill continues to afford corporations covered by the disclosure requirement with the opportunity to give the Secretary of State additional information as part of their annual disclosure reports. This provision was included to provide corporations with an opportunity to provide a fuller understanding of the financial and tax information being disclosed.\(^{184}\) The Secretary of State must make all of the above information available for public inspection.

Under the Massachusetts law, the Commissioner of Revenue is required to publish an aggregate statistical report of the taxes collected from corporations and other businesses, as well as many of the claimed tax credits, deductions, exemptions, and exclusions. The report must disaggregate data by industry and categories of firm size.\(^{185}\)

---

\(^{183}\) MASS. GEN. L. ch. 62C, § 83(c) (1992).

\(^{184}\) MASSACHUSETTS STAFF DRAFT, supra note 182, at 5.

Notwithstanding the political compromise that led to the reduced disclosure provisions, more changes may still occur. In July, 1993, the Special Commission on Business Tax Policy voted to recommend legislation that would replace the existing tax disclosure law with a system of coded disclosure under which corporations would be identified only by a number. It was further recommended that the coded disclosure indicate the amount of tax credits claimed by a corporation. Finally, it was recommended that each corporate filer not part of a combined return should enter on its tax disclosure report a numerical code indicating the multicorporate entity, if any, with which it is affiliated.186

In a controversial parliamentary procedure of dubious legality,187 the Massachusetts Senate adopted a version of the Majority Report.188 In a significant deviation from the Majority Report, however, the Senate bill provided that the number assigned to each corporation as part of the anonymous disclosure must be changed from year to year. Moreover, there is no provision for identifying affiliated corporations.189

B. West Virginia

Under legislation passed in 1991, the West Virginia Tax Commissioner must publish in the State Register the name and address of every taxpayer, whether a corporation or individual, receiving certain tax credits, and the amount, by dollar category, of each credit received.190

186. Today's Tax Highlights, STATE TAX NOTES, July 12, 1993, at 74; MAJORITY REPORT, supra note 181, at 16. The Commission made further recommendations on bank tax reform, administrative changes, improving audits and collections, and forming a task force to study the taxation of insurance companies.

188. See Mass. S.B. 1757.

189. Id.

190. Taxpayers that claim any of the following twelve tax credits are subject to disclosure: Business Investment and Jobs Expansion Tax Credit; Industrial Expansion and Revitalization Credit; Research and Development Credit; Residential Housing Development Credit; Management Information Services Facility; Coal Conversion Facility Credit; Coal Loading Facility Credit; Excess Generation of Electricity from Coal Credit; Low Income Electric Utility Credit; Low Income Gas Utility Credit; Low Income Telephone Utility Credit; Capital Company Credit.

The following dollar categories are to be used in the required disclosure report: Not more than $50,000; More than $50,000, but not more than $100,000; More than $100,000, but not more than $250,000; More than $250,000, but not more than $500,000; More than $500,000, but not more than $1,000,000; More than $1,000,000. W. VA.CODE § 11-10-5s(a) (1991).
The statutorily-stated purpose behind the legislation was to recognize "the citizens' right to accountable and efficient state government."\textsuperscript{191} The Department of Revenue will issue its first report in December 1993.

Support for the disclosure legislation arose after publication of a report by the West Virginia Department of Tax and Revenue.\textsuperscript{192} This study showed that only a small number of taxpayers benefit from the West Virginia investment and jobs expansion credit ("supercredit").\textsuperscript{193} As of 1990, approximately 200 taxpayers had utilized the supercredit, representing less than one percent of total corporate net income filers. About fifty taxpayers claimed credits in excess of $100,000 annually.\textsuperscript{194} The supercredit is used primarily by industries that have been reducing employment, especially the coal industry, which between 1985 and 1988 received nearly ninety percent of the credit. According to the study, the costs of the supercredit have escalated. In 1985, the supercredit cost $287,000, but by fiscal year 1991, it was expected to cost the state $60 million.\textsuperscript{195} The supercredit effectively eliminates all West Virginia tax liabilities for a thirteen year period for most qualifying taxpayers.

Opponents resisted the disclosure legislation on the grounds that it would impair West Virginia's business climate. Businesses did not lobby strenuously against it, however, out of fear that the legislature might actually reduce the supercredit.\textsuperscript{196} Although they were not successful at stopping the legislation, businesses won a major concession in the way the categories used for reporting purposes would be designated. The last category, the "more than $1,000,000," was favored by large companies "eager to conceal their annual tax credits of over $10,000,000."\textsuperscript{197}

\textsuperscript{191} Id.
\textsuperscript{192} David J. Muchow et al., First Report on Supercredit (1990).
\textsuperscript{193} "Supercredit" is the popular name for West Virginia's business investment and job expansion tax credit.
\textsuperscript{194} This skewed distribution of the benefits also occurred in New York with respect to that state's investment and employment tax credits. See Richard D. Pomp, Reforming a State Corporate Income Tax, 51 ALB. L. REV. 375, 629-38 (1987).
\textsuperscript{195} Many of these findings parallel New York's experience with its investment and employment tax credits. Id.
\textsuperscript{196} It is not uncommon for the cost of tax expenditures, such as investment tax credits, to rapidly outstrip the revenue losses that were projected at the time they were first being debated. Id. at 570, 617. For a more detailed discussion of tax expenditures, see infra part IV.B.1.
\textsuperscript{197} Massachusetts Staff Draft, supra note 182, at iii (Appendix).
C. Arkansas

In 1991, Arkansas authorized the disclosure by name of taxpayer, both individuals and corporations, of the amount of certain tax credits, rebates, tax discounts, or commission for the collection of a tax received by the taxpayer.\(^{198}\)

Arkansas law also provides that the disclosure requirement encompasses any tax incentive program enacted after January 1, 1991 which provides a tax credit, tax rebate, tax discount, or commission for the collection of a tax, with the exception of any such benefits under the state income tax.\(^{199}\) Although the law is drafted in terms of "disclosing" the name of the taxpayer and the amount of the tax benefit, the Arkansas Department of Finance and Administration is not required to publish any type of report or to analyze the data covered by disclosure.\(^{200}\) Rather, a person must request the information from the Director of Taxation, who must notify the taxpayer that information has been requested.\(^{201}\) The taxpayer has up to seven days to challenge the release on the grounds that it would give an advantage to "competitors or bidders," or that it is in some other way prohibited.\(^{202}\) Apparently, only a few businesses have opposed the release of information, although the seven day period may discourage challenges.

---

198. Two percent discount for prompt payment of the sales tax; Manufacturer's investment sales and use tax credit; Steel mill tax incentives; Motor fuel shrinkage allowance; Arkansas Enterprise Zone Act [expires 1995]; Commission for sale of stamps for cigarettes in the collection of cigarette taxes; Motion Picture Incentive Act of 1983; Credit on severance tax of oil producers; Credit on severance tax of gas producers; Refund of motor fuel tax for agricultural purposes; Refund of motor fuel tax by municipal buses; Refund of distillate special fuel tax to interstate users; Credit against severance tax for discovery of commercial oil pool; Native wine. ARK. CODE ANN. § 26-18-303(b)(11)(A)-(P) (Michie 1987). The Massachusetts Staff Draft describes the credits covered by the Arkansas disclosure law as "small" but offers no support for this characterization. THE MASSACHUSETTS STAFF DRAFT, supra note 182, at 8.

200. There is no sanction against a newspaper, however, publishing such information.

201. If the request is for information on 10 or less taxpayers, notice is mailed to the taxpayers' addresses of record. Otherwise, notice is published once in a newspaper having general circulation in the state. The person requesting the information must reimburse the Department of Finance and Administration for the cost of producing the information. Disclosable Tax Information, Ark. Reg. 1991-7 (1986).

202. § 26-28-303(g)(1).
One group of taxpayers that successfully enjoined the Director from disclosing information to an out-of-state competitor involved wholesale tobacco distributors. They successfully argued in the lower court that disclosing the amount of commissions received by cigarette wholesalers in Arkansas for the sale of stamps and cigarettes and the collection of cigarette taxes received by a tobacco wholesale grocery could be used to determine total cigarette sales. In conjunction with other available data, this disclosure would give competitors an advantage in marketing and selling cigarettes. The decision currently is under appeal.

The disclosure legislation in Arkansas has a unique background, with its roots in that state's Freedom of Information Act ("FOIA"). In 1986, the Arkansas Supreme Court ruled that motor fuel tax records were subject to disclosure under the Arkansas FOIA, one of the broadest public records acts in the country. To overrule that case, key oil dealers in the Arkansas Legislature sponsored a 1987 amendment that insured the confidentiality of all tax returns and tax reports. The Arkansas Society of Professional Journalists fought this amendment unsuccessfully in 1987, but the journalists' persistent efforts led to the 1991 disclosure law.

Issues of tax reform did not play a dominant role in the Arkansas discussions; the disclosure issue was basically argued in terms of openness in government. Because income tax data were never within the purview of the FOIA, no one during the debates over the 1991 law suggested that disclosure be extended to that tax. Moreover, no one suggested that information covered by the 1991 law be published by the state. Under the FOIA, information would have been available only to the person making the request, and the 1991 law, intended to mirror the status quo ante under the FOIA, adopts a similar position.

D. Wisconsin

Wisconsin's first income tax law, enacted in 1911, prohibited tax administrators from disclosing income tax information under penalty of
fine or imprisonment. In 1919, the statute was amended to permit disclosure of income tax information to property tax assessors "as may be necessary in the proper performance of [their] duties." In 1923, the nondisclosure provisions were repealed partially in response to concerns that corporations were using the secrecy provisions as a shield for tax evasion. From 1923 until 1953, the actual Wisconsin income tax return was public information, despite strong opposition from business organizations and attempts by the legislature to restore the secrecy provisions. In 1953, anti-disclosure advocates succeeded in amending

207. 1911 Wis. Laws 658, § 1087m-24(1-3).
208. 1919 Wis. Laws 638, § 1087m-24(1).
209. 1923 Wis. Laws 39.
210. The Governor of Wisconsin called for repeal of the nondisclosure law shortly after World War I, when federal tax officials notified him that many Wisconsin corporations were underreporting their federal income taxes. N.Y. REPORT, supra note 6, at 74. In 1943, in vetoing a bill to restore secrecy, Governor Goodland described disclosure as "an important factor in enforcing just tax obligations and in preventing tax-dodging and tax frauds." Wis. Sen. J. 1394 (July 13, 1943).

211. A statute enacted in 1933 provided that "no person shall divulge or circulate for revenue or offer to obtain, divulge or circulate for compensation any information derived from an income tax return . . ." Wis. Stat. § 71.20 (1993). This statute expressly excluded from its prohibition newspaper publication of income tax information and reference to such information by public speakers. Id.

212. Anti-disclosure advocates included business organizations such as Chambers of Commerce, along with a good many individuals. Groh, Where Income Taxes are Public, THE REPORTER, Feb. 19, 1952. A Wisconsin newspaper reporter who covered the state legislature in the late 1940's and early 1950's recalls that the Wisconsin Manufacturers' Association opposed public disclosure of income tax information and that the state's Republican Party made repeal of disclosure a political priority, claiming that it "drove business and wealthy people out of the state." Telephone interview with John Patrick Hunter, Associate Editor, Madison Capital Times (Mar. 3, 1986).

213. The first bill to restore secrecy failed to pass. The second fared slightly better—it passed the Legislature but was vetoed by Governor Goodland. In his veto message, the Governor emphatically denounced the proposal to restore income tax secrecy:

I have always contended and now contend that secrecy in government is a bad thing; that taxation is a public matter; that the tax returns of those who pay real estate and personal property taxes have no veil of secrecy drawn over them; that no honest return need fear publicity; that it is only the return made by the person or corporation that evades the law that needs the veil of secrecy. . . . to shut out from public view that which may be a fraud, a cheat, or even a mistake.

(continued)
the law to deny public access to the actual tax returns but to permit disclosure only of net taxes paid.\textsuperscript{214}

In Wisconsin, the public has access to the amount of income tax paid by both individuals and corporations. The state's Department of Revenue must furnish to anyone who requests information about the net income tax, franchise tax, or gift tax reported in any year by any individual or corporation.\textsuperscript{215} The following conditions must be satisfied:

(1) individuals seeking the information must be Wisconsin residents;\textsuperscript{216}
(2) persons must pay a four dollar fee per return from which information is sought;
(3) persons must prove their identity and sign a statement disclosing their addresses and reasons for making the request.\textsuperscript{217}

This information is sent to the individual or corporation whose tax information is being requested.\textsuperscript{218}

Wis. Sen. J. 1397 (July 13, 1943). Goodland cited a large volume of citizen communications urging him to veto the bill as evidence that public opinion favored disclosure. \textit{Id.} at 1395.

\textsuperscript{214} 1953 Wis. Laws 303. This statute incorporated a 1951 amendment that instituted a $1 inspection fee and that required notifying the taxpayer whose tax information was sought. 1951 Wis. Laws 714. The current statute is substantially unchanged from its 1953 form. The \textit{Massachusetts Staff Draft, supra} note 182, at 14, reports two reasons why Wisconsin changed its law from making the entire state tax return public to making only the net tax paid public. One was concern that state tax information would be abused by then-Wisconsin Senator Joseph McCarthy. The other reason was the opposition of business groups, such as chapters of the Chambers of Commerce. \textit{Id.}

\textsuperscript{216} \textit{Id.} This section prohibits disclosure to non-residents, or residents acting on behalf of non-resident individuals, firms, or corporations, "except to the extent that similar information in the state of residence of such person or firm or the state of incorporation of such foreign corporation is made available to residents of Wisconsin or Wisconsin corporations."

\textsuperscript{217} Wis. Stat. § 71.11(44)(b) (1984). The requirement that an individual state the reason for making the request is meaningless in practice. Apparently, information-seekers are not required to furnish any special reason; curiosity is sufficient. Telephone interview with Nick Baldarotta, Custodian of Records, Wisconsin Department of Revenue (Mar. 6, 1986).

\textsuperscript{218} Wis. Stat. § 71.11(44)(b). One department official reported that notifying the taxpayer of the request for information deters some persons from seeking information. "A lot of people are reluctant to let others know that they (continued)
The Wisconsin Action Coalition ("WAC") used this provision of the Wisconsin law to compile a list of major corporations doing business in Wisconsin that had not paid state income taxes. On two different occasions, the WAC's work played a major role in the passage of legislation establishing a new corporate minimum income tax. In both cases, the Governor vetoed the proposed tax.  

E. Lessons to Date

What lessons can be drawn to date from the experience of other states? As the efforts of Citizens for Tax Justice have demonstrated, federal tax information in the public domain can be used constructively to focus attention on the esoteric and sometimes intimidating world of corporate taxation. What little experience exists at the state level is consistent with CTJ's federal success. In Wisconsin, for example, the Wisconsin Action Coalition was able to use publicly-available state data to generate an informed discussion of the need for a corporate minimum tax. The result of this discussion, to date, has been the passage by the Wisconsin Legislature of two bills establishing a corporate minimum tax and the veto of both bills by Governor Tommy Thompson.

The laws in Arkansas, West Virginia, and Massachusetts were enacted so recently that no information is yet available on their use or impact. The first disclosures under the Massachusetts and West Virginia legislation are scheduled for December 1993. The Arkansas disclosure requirements were not motivated by tax reform considerations; whether it will be used for this purpose may depend on the newspapers and other media that advocated that state's law. The West Virginia legislation, which deals only with credits, suffers because the categories for presenting the data are not detailed enough to be very useful. The Massachusetts law has the potential for being catalytic because of the

are looking for information on their tax returns." Telephone interview with Nick Baldarotta, supra note 217.

219. Conversation with Jeffrey Eagan, Executive Director, Wisconsin Action Coalition (Aug. 18, 1993). Curiously, although the staff of the Massachusetts Special Commission on Business Tax Policy interviewed Eagan, no mention is made in the MASSACHUSETTS STAFF DRAFT, supra note 182, that information obtained under Wisconsin's disclosure law actually led to the passage two separate times of an alternative minimum corporate income tax. All that report notes is that the Wisconsin Action Coalition's "widely publicized paper sparked a debate about whether Wisconsin should adopt a minimum corporate income tax." MASSACHUSETTS STAFF DRAFT, supra note 182, at 34 (citing telephone interview with Jeff Egan [sic] of May 18, 1993).

220. See supra note 219 and accompanying text.

221. See supra notes 190, 197 and accompanying text.
heightened public attention and scrutiny by all sides. Its future is problematic, however, due to the vitriolic opposition of elements of the business community, the recent recommendation of the Special Commission on Business Policy, and the vote of the Massachusetts Senate.222

III. EVALUATING THE CASE FOR STATE-LEVEL TAX DISCLOSURE BY PUBLICLY-TRADED CORPORATIONS

This portion of the article evaluates the arguments on behalf of state-level disclosure. The arguments assume that disclosure would apply to publicly-traded corporations,223 which are already subject to the extensive disclosure requirements of the SEC. These corporations not only reveal extensive financial data about their activities, but also disclose the amount of their federal income taxes as well as the aggregate amount of their state income taxes.224 State-level disclosure would require these corporations to disaggregate information that they already make public, albeit in aggregate form.

This section also considers the arguments against disclosure and concludes that the arguments in favor easily outweigh the counter arguments against it. Accordingly, the next section of the article discusses some of the policy and technical issues that must be resolved in formulating a state-level disclosure law.

A. Firm-Specific Disclosure is Necessary for Informed Tax Policy

Residents, businesses, and public officials in every state have an obvious interest in the workings of their states' corporate income taxes, if for no other reason that significant sums of money are involved both in the amount of corporate taxes imposed and in the amount forgiven through tax expenditures.225 On a more fundamental level, state taxation of corporate income, or the exemption from it, raises essential value judgments about how the costs of government should be distributed. Both large-scale corporate tax avoidance and inefficient tax expenditures

223. See discussion infra part IV.A.
224. See supra text accompanying note 168.
mean that a state must rely more heavily on the corporate tax than otherwise, or rely on other taxes with different incidence patterns, or reduce spending for important capital or operating purposes.

In addition to the questions raised regarding tax distribution between corporations and individuals, another significant issue is how the corporate tax burden is distributed among corporations in the same industry and among different industries. At the federal level, at least prior to the 1986 tax reforms, corporate tax incentives were shown disproportionately to benefit certain industries and firms.\textsuperscript{226}

The federal corporate income tax was characterized as striking inter- and intra-industry disparities in effective corporate tax rates. Similar state tax differentials undoubtedly exist. In many states, the corporate tax is replete with provisions that distinguish between small and large corporations, in-state corporations and out-of-state corporations, capital-intensive corporations and labor-intensive corporations, and corporations that sell out-of-state and those that sell within the state.\textsuperscript{227} The 1986 federal tax reforms' objective to level the playing field remains a mere fantasy in most states.

Tax credits and other incentives or subsidies features of the corporate income tax present another major concern. To evaluate whether tax incentives serve their ostensible purposes, researchers must know, at the very least, which corporations received what types of incentives and in what amounts. Only then can it be determined whether the benefits to society of these incentives justify the forgone revenue, and whether such incentives need to be enhanced, reduced, or redirected.

Firm-specific data facilitate consideration of a full range of issues surrounding corporate tax policies. Disclosure facilitates informed and critical evaluation of the distribution among corporations of tax burdens and of corporate requests for tax relief—requests that may be underscored by express or implied threats to abandon a state for a more favorable tax climate. Disclosure allows the public to evaluate more effectively corporate claims that their enterprises are straining under an excessive tax burden. Disclosure would discourage corporations from misleading legislators and the media by taking public positions that are inconsistent with the facts.

Without firm-specific data, it is not possible to do the type of analysis, known as microsimulation, which provides the most accurate picture of the impact of tax policy changes. Only with microsimulation is it possible to consider the interrelationship of different provisions of the tax code. The use of aggregate data can result in significant over or

\textsuperscript{227} See, e.g., Pomp, \textit{supra} note 193.
underestimations of the impact of policy changes, particularly when more than one change has been made, which is usually the case when tax laws are revised.

Microsimulations provide an increasingly important tool to sophisticated governmental tax policy units. An increasing number of consulting firms are also developing microsimulation models of particular state taxes on behalf of state agencies. These agencies realize that such models are important if the agency is to participate in tax policy making in an informed manner.

Microsimulations evaluate the impact of particular changes in the tax law on both the yield of the tax involved and on the distribution of the burden among taxpayers. For example, a corporate income tax microsimulation model would allow the user to determine how much of a reduction in the rate of a particular tax could be financed by eliminating a particular credit without reducing the overall yield of the tax. A model could also determine how such a revenue-neutral change would redistribute the burden of the tax involved among industries or among firms in different size categories; how many are likely to pay more and how many are likely to pay less; and the number of such increases and decreases that are likely to result in particular categories.

A microsimulation model for a particular tax involves the interaction of two key components, both of which should be carefully developed and maintained. The first component is a computer model or simulation of the tax. Similar to the personal computer software that is now widely available for computing federal personal income tax, this component involves programming the model to compute the tax liability under study. This programming should account for all the various options and elections that the law allows and must be intricate enough to capture all the nuances and subtleties that are characteristic of tax planning. The difference between this component of a microsimulation model and the software sold for tax preparation purposes is that the former must be designed to provide the user with the ability to modify different aspects of the rules (e.g., changes in the apportionment factor, changes in the rules for combined reporting, alterations in the availability, size, or nature of various deductions, exemptions, or credits) in order to determine the impact of policy options on the tax liability of a taxpayer with a particular mix of income, deductions, filing status, etc.

The second component would consist of a data base containing either the universe of the taxpayers subject to the tax or a stratified sample of actual taxpayers. In the case of microsimulation models for the personal income tax, the typical data base is drawn from a statistically valid sample of tax returns, with the identities of the taxpayers protected for privacy reasons, and with weightings attached to each file based on the total number of taxpayers for whom that sample file is representative. Some state personal income tax simulation models use samples drawn
from state tax returns, while others use a sample of the federal tax returns filed by residents of the state involved.

For the corporate income tax, no comparable data base is available. Because of the relatively small number of corporate income taxpayers compared to personal income taxpayers, and the relatively small number of firms that represent the bulk of a state's corporate tax revenues, it is impossible to take a statistically valid sample of returns without the risk of identifying individual firms. Consequently, the data necessary to create a corporate microsimulation model are not available, under current law, to parties outside state revenue departments. This significantly limits the ability of other interested organizations to participate in the most informed manner possible in debates over corporate tax policy. Only with firm-specific corporate tax disclosure can this important tool be used most effectively to enhance openness and accountability in the tax legislative process.

An additional constraint exists in developing a valid data base for state corporate microsimulation models. While a state personal income tax microsimulation model can be constructed with a sample of federal tax returns filed by residents of the state involved, this would not be possible with regard to the corporate income tax.

Unlike a state corporate income tax, states tax their residents on their worldwide income. A state sample built on federal returns can be derived for the personal income tax because the individual who files a federal return is considered to reside in the state indicated in his or her mailing address. Worldwide income can be determined from the federal income (although some adjustments are typically necessary). By contrast, states tax corporations on an apportioned share of their income. Unlike the individual taxpayer, an enterprise's state of incorporation and consequently its state of residency is not significant. Moreover, the amount of income that a corporation reports to a state cannot be determined from the federal return. State-level corporate disclosure, such as that enacted last year in Massachusetts, would allow for the development of an effective corporate microsimulation model at the state-level.

In addition to facilitating the use of microsimulations, other areas require firm-specific data rather than aggregate data. For example, it is virtually impossible based only on statistical aggregates to evaluate the claims of various corporations for tax relief or to verify other tax-related information that corporations might provide in their lobbying efforts. Moreover, evaluating the worth of various tax incentives without knowing the identity of the beneficiaries is inherently difficult. Indeed, the only way to conduct a meaningful cost-benefit analysis of a provision like the investment tax credit is to identify the major beneficiaries and do longitudinal studies using other sources of data, such as employment and investment data.
Disclosure eliminates one of the subtle but serious defects with the use of aggregate data. All too often, researchers are interested in the "outliers." For example, a 1982 study of the New York investment and employment tax credits indicated that two corporations received nearly forty percent of all of the credits allowed, totaling $56.8 million. Yet, on an aggregate basis, the average credit claimed was $16,423 and half of the claimants received credits of less than $1172. Clearly, statistical aggregates can simply hide much of value in evaluating a state tax system. If, for example, a few of the largest corporations in a state pay no or only a minimum income tax, such information is highly relevant from a policy perspective, but might be lost if buried in an aggregate.

Moreover, firm-specific information on gross receipts, gross sales, or gross profits is essential in attempting to pinpoint the use of transfer pricing to minimize tax liabilities. For example, an analysis of similar firms in the same industry might reveal differing ratios of tax-to-gross receipts. Knowing the identity of the corporations involved can help identify which ones constitute the multicorporate families that might reduce their state taxes through intercorporate transfers. A correlation between low ratios of tax-to-gross receipts and transactions among related corporations merits further attention as a possible situation involving transfer pricing abuse.

In addition, publishing statistical data without identifying the taxpayers involved inevitably limits its use by researchers. Statistical information can be presented in various ways. For example, income taxes

228. See Pomp, supra note 193, at 630-35.
229. See supra note 182. One of the criticisms of a paper produced by the Staff of the Massachusetts Commission was that it was forced to rely on the use of aggregates, averages, and medians, and could not identify any outliers. Furthermore, a meaningful effective tax rate calculation, which is needed to determine the uniformity of a state corporate income tax, is impossible to develop without some measure of book income that can be applied on a corporation-by-corporation basis, and this requires knowing the identity of each taxpayer.
230. The Massachusetts Staff Draft, supra note 182, at 32, acknowledges the problem of transfer pricing but concludes that "[i]n order to evaluate the degree to which the Commonwealth's multicorporate taxpayers engage in such practices, investigators would need the tax returns and financial records of every affiliate of a company, including those in other states. Only auditors have, and should have, the authority to subpoena such an extensive array of documents." Id. Apparently the report overlooks the possibility of identifying transfer pricing situations as suggested in the text. For one recent state example of a situation involving transfer pricing and the use of a Delaware holding company in an unsuccessful attempt to minimize tax, see Geoffrey, Inc. v. South Carolina Tax Comm'n, 437 S.E.2d 13 (S.C. 1993).
paid by a corporation can be compared with its receipts, property, number of employees, amount of assets, type of business, and so forth. The value of the data is obviously constrained by the way it is presented. What might be a valuable presentation for some policy makers and researchers would be irrelevant for others. By contrast, if the data are presented with the name of the corresponding corporations, researchers can correlate the tax information with any other sources of data. Researchers can pursue whatever issues are most relevant then, or at any time in the future. Without knowing the name of the corporations, researchers would not be able to use the information disclosed in conjunction with the information in Form 10-K's, annual reports, and other data bases.

Finally, many states today routinely publish aggregate data on corporate taxes. What has occurred is that the fear of violating existing laws on the privacy of tax returns constrains the publication of statistical data. Situations commonly exist in which knowing certain limited information about an unnamed corporation, such as its size and the nature of its primary business activities, allows an informed judgment and a corresponding inference to be made about its identity. Consequently, in order to avoid publishing statistical information in a manner that facilitates identifying particular corporations, a common practice is to sanitize the data by intentionally aggregating it and presenting it as part of a larger group or class. Obviously, the need to present data in a manner that protects the identity of a taxpayer reduces the value of the information that is made public. Moreover, those situations in which the data need to be sanitized are probably the precise circumstances in which the public interest is greatest because they involve major taxpayers.

As the above discussion demonstrates, the practice of using statistical aggregates is no substitute for data on a corporation-by-corporation basis. Nonetheless, the Massachusetts Special Commission suggested that firm-specific data could be released on an anonymous or coded basis. This suggestion is evaluated below.

---

231. Without addressing any of the arguments in the text, the Chairman of the Massachusetts Commission on Business Tax Policy concluded that "disclosure does not bring additional information to the table." MAJORITY REPORT, supra note 181, at 18.

232. See infra part III.E.
B. Firm-Specific Disclosure is Essential to Public Understanding and Support of Corporate Tax Reform

Public understanding of seemingly complex issues has been essential to the development and implementation of the many important reforms instituted at the state and national levels during the twentieth century. Public awareness, understanding, and pressure laid the groundwork for food and drug laws, securities laws, antitrust laws, wage and hour laws, and statutes regulating the rates of railroads, public utilities, and other firms with monopoly power. Public opinion was critical in supporting the corporate tax changes in the Tax Reform Act of 1986. In our system of democratic capitalism with its extensive system of checks and balances, significant economic reforms usually require the force of public opinion. Obviously, public opinion is not sufficient in and of itself for the enactment of major reforms, but it is clearly a necessary condition.

Economists, lawyers, and other "experts" can develop an understanding of complex issues in the abstract, based on either theoretical or empirical reasoning. But for the non-specialist, the intelligent layperson who does not devote his or her working life to mastering a particular issue or problem, real-life examples help develop the necessary understanding. To be sure, government officials cannot justify far reaching changes on the basis of anecdotal information. At the same time, however, legislators are unlikely to enact legislation, even if based on sound theoretical and empirical reasoning, if they are unable to explain the need for such laws to the ordinary citizen; nor, in our form of democracy, should they be able to do so.

As the federal experience in 1986 powerfully demonstrates, without disclosure the public will remain strangers to the world of corporate tax reform. Aggregate data or even firm-specific anonymous data provide no substitute for disclosure. It is a basic truth that in order to spark interest in an issue it must be made real and human. A cold statistic is just that—cold. Eyes glaze and interest wanes. Policy makers and other concerned citizens cannot have a dialogue with a statistic. The impact that CTJ had on federal tax reform provides a dramatic example of the effectiveness of using "warm bodies" rather than impersonal data. After all, no shortage of statistics existed before CTJ's work, but the arid raw data alone were not enough to galvanize the public into supporting sweeping reform.

Opponents of disclosure contend that the general public is relatively unsophisticated about tax matters and would be unable to understand the significance and implications of corporate tax information. According to

233. See sources cited supra note 182 and accompanying text.
opponents, only tax experts can understand the multifarious and complex factors that interact to generate a corporation's tax liability. The public will merely be confused, or unreasonably angered, by learning of nominal corporate tax liabilities. The public lacks the astuteness and sophistication to appreciate why a corporation's liabilities are only nominal. Of course, the fact that the public is relatively uninformed about state corporate taxes is an argument in favor of—not against—disclosure.

Taken seriously, the "public will misunderstand" argument would emasculate much of the SEC disclosure requirements as well as similar provisions in other legislation. The lay public may not be able to read a balance sheet, but it can understand those who are able to translate the impenetrable world of financial accounting into comprehensible language. The public may not have fathomed the intricacies of tax shelters, accelerated depreciation, or investment tax credits, but it understood the need to reform the federal tax system in 1986.

This "ignorant public" argument ultimately challenges the premises underlying a democratic society. A well-functioning democracy requires an informed public. If corporate officers feel that the disclosed information would likely be misinterpreted, they can educate the public by providing more information and a fuller explanation. If the media report a large, profitable corporation with a seemingly low tax liability, that taxpayer can use its public relations resources to explain, for example, how the existence of loss carryovers or tax credits helped lower its tax liability. This dialectical process is one that routinely occurs in contemporary society, exemplified by corporations that buy advertising space in newspapers and magazines regarding tort or health care reform, plant closings, labor disputes, or alleged malfeasance by corporate

234. Strauss notes "that the tax circumstances facing a multistate business in other states is not to be reported to the [Massachusetts] Secretary of State for subsequent public inspection, the possibilities for misunderstanding and/or misinformation appear to be significant." Strauss, supra note 182. However, Massachusetts law allows a corporation to provide any other information to the Secretary of State that it deems necessary. Even without this provision, a corporation could always use its public relations resources to avoid any misunderstanding or misinterpretation of published data.

235. See infra notes 236-53 and accompanying text.

236. The Massachusetts legislation provides this opportunity. See supra note 184 and accompanying text.

237. The Massachusetts Special Commission on Business Tax Policy described the provision in Massachusetts law that allows corporations to explain the disclosed information or provide additional information, as "connot[ing] guilt until innocence is proven." MAJORITY REPORT, supra note 181, at 20.
officers. This process plays a critical role in a healthy democracy.\textsuperscript{238} Perhaps the real fear is not that the public will misunderstand but that it will understand too well. As the Staff of the Massachusetts Special Commission on Business Tax Policy observed, "disclosure of tax information on specific companies has proven to be an effective means of crystallizing support for tax reform."\textsuperscript{239} 

C. Sunlight is the Best Disinfectant: Disclosure Would Promote Openness and Accountability

State disclosure is just another reminder that as Justice Brandeis observed, "sunlight is the best of disinfectants."\textsuperscript{240} Not surprisingly, the principal architects of the early securities acts were disciples of Justice Brandeis.\textsuperscript{241} Good government requires openness; the free flow of information is a remedy for poor policies and political ills. "Information is the currency of the 'marketplace of ideas,' the prerequisite for political self-determination, and a security against usurpation by secret cabals."\textsuperscript{242} In short, public information provides a check on government through public accountability, which is especially valuable in the opaque world of taxation. Openness and accountability make it less likely that tax laws will be made behind closed doors, where special interests will prevail over the public good.

\textsuperscript{238} In comments that could describe debate over any controversial issue of the day, the Massachusetts Special Commission on Business Tax policy concluded that,

```
public disclosure . . . may confuse rather than clarify debate about corporate tax equity. Some commentators are likely to oversimplify their analysis, claiming inequities and distortions when none in fact exists. Such charges, rather than leading to enlightened debate, could engender acrimony and hostility between public interest groups and businesses, damaging the Commonwealth’s already shaky business climate.
```

\textsuperscript{239} MAJORITY REPORT, supra note 181, at 20.
\textsuperscript{240} MASSACHUSETTS STAFF DRAFT, supra note 182, at 1.
\textsuperscript{241} LOUIS D. BRANDEIS, OTHER PEOPLE’S MONEY 92 (1932).
\textsuperscript{242} SEC DISCLOSURE TO INVESTORS: A REAPPRaisal OF ADMINISTRATIVE POLICIES UNDER THE '33 AND '34 SECURITIES ACT 50 (1969) [hereinafter SEC DISCLOSURE TO INVESTORS].
The modern trend in the United States, inspired in part by the SEC, calls for more disclosure. The SEC's disclosure requirements had a significant influence on several pieces of legislation that Congress passed following World War II, including numerous air, water, and toxic substances pollution statutes; the Occupational Safety and Health Act; the Equal Employment Opportunity Act; the Freedom of Information Act; the Truth in Lending Act; the Interstate Land Sales Full Disclosure Act; the Consumer Credit Protection Act; the Real Estate Settlement Procedures Act; the Fair Credit Reporting Act; and the Employee Retirement Income Security Act (Pension Reform Act). As these various pieces of legislation exemplify, our society has a clear bias in favor of making information available, not only so that we may make informed decisions, but also so that we may have confidence in our institutions. We should esteem disclosure for the same reason we should esteem "sunlight"—because it illuminates.

"Sunlight" with respect to state corporate tax data will help to restore confidence in the tax system, as well as in the business community. If disclosure demonstrates that the current tax system comports with generally acceptable norms, the public should be assured that large businesses are good "citizens." If, on the other hand, disclosure helps to identify shortcomings in the current law, it will provide the basis for necessary reform, which will restore public confidence in the corporate sectors and in the tax system.

D. State-Level Disclosure Will Complement SEC-Mandated Disclosure

Compared with the extensive information already in the public domain because of SEC requirements, state disclosure appears modest and mundane. Primarily through the efforts of the SEC, the public has been
given a picture window into the financial affairs, including the income tax data, of publicly-traded corporations. State disclosure would open that window a crack more.

Moreover, state disclosure would improve the utility of the SEC-required information to many users of financial statements. Among the primary users of the tax information in SEC-mandated financial statements are securities analysts and other financial analysts who evaluate the financial performance of publicly-traded corporations. Many occasions exist when an analyst must remove an unusual and non-recurring income or expense from an income statement in order to evaluate the on-going performance of the corporation involved.254 "When a non-recurring item needs to be removed from the income statement, the tax results of that item also need to be removed."255 A failure to take the tax consequences of such an item into consideration will distort the analysis of income by the use of an improper tax rate and will also result in an inconsistent presentation of the balance sheet. Although the SEC-required disclosure is sufficient to adjust for the federal consequences of the item, it will in many cases not be sufficient to make the necessary change in the state tax results.

The SEC-disclosed federal tax information is also used by analysts to determine how well or poorly the company's management handles tax planning and implementation.256 This aspect of the analyst's work could also be enhanced by the availability of state-specific data.

Some critics of state-level disclosure have argued that the availability of information of a firm's state tax liability might somehow disclose proprietary information.257 If this were true, then the current SEC requirement for disclosure of the aggregate amount of state income taxes would have more of a negative impact on those corporations paying state income taxes to only one (or a few) state(s) than on those operating nationwide or internationally. Disclosure would then level the playing field among these publicly-traded corporations.

State disclosure would level the playing field in yet a different manner. According to some commentators, the public knows a great deal about small and medium-sized corporations because they are more specialized than larger corporations. For the smaller, more specialized corporations, the annual report and Form 10-K provide real insight into their line of business. "But not so with a large conglomerate corporation

254. For example, this must be done to assess the quality of a firm's earnings and the trends in its income and expenses that are likely to continue.

256. I d.

257. S e e i n f r a part III.G.
whose annual report masks more than it reveals. Not surprisingly, therefore, it is the large corporation that invariably resists steps to strengthen disclosure requirements—steps that in practice would, at most, place it on a par with smaller corporations.\textsuperscript{258}

E. Why Not Disclose Firm-Specific Data Anonymously?

The Massachusetts Special Commission on Business Tax Policy recommended that the state's current law be amended to provide for the release of data on a corporation-by-corporation basis but without identification of the name of the corporation.\textsuperscript{259} For example, information on each corporation would be available but a corporation might be identified only by a number that would not reveal its identity.

Although this approach would allow those corporations which lie at the statistical extreme to be identified rather than being buried in a statistical aggregate, the other inherent defects of using aggregates would remain. For example, the enhancement of public and legislative understanding would be as difficult to achieve with anonymous corporation-by-corporation data as it has proven to be when only aggregate data are available. In addition, researchers would be limited to only what was published and would have no way of tapping other sources of data. The cross-tabulation of the disclosed tax data with other publicly-available information would be impossible. Inter- and intra-industry studies would be impossible. Longitudinal studies would be difficult, as would studies about the effectiveness of tax incentives.\textsuperscript{260} Corporations would still be able to take public positions that would be inconsistent with the facts. None of the goals of accountability, openness in government, and the involvement of the public in issues of tax reform would likely be achieved with anonymous disclosure. Information that Corporation \#123 has paid the minimum tax despite over $100 million in profits will be unlikely to have any lasting effect on tax reform. By comparison, disclosure by name of corporation has proven to be an effective means of mobilizing support for reform.\textsuperscript{261}

\textsuperscript{259} \textit{MAJORITY REPORT}, \textit{supra} note 181, at 10.

\textsuperscript{260} Undercutting whatever minimal benefits might flow from anonymous disclosure, the Massachusetts Senate passed a bill providing that the number identifying a corporation would change every year. \textit{See supra} note 188 and accompanying text. This approach would obviously eliminate the possibility of conducting longitudinal studies.

\textsuperscript{261} \textit{MASSACHUSETTS STAFF DRAFT}, \textit{supra} note 182, at 1.
Anonymous disclosure will be particularly problematical in states in which the disclosure system is being administered by an agency other than the state tax department. In Massachusetts, the administering official (the Secretary of State) has no basis on which to evaluate the accuracy of the information submitted. With anonymous disclosure, this problem is compounded because the information submitted by a firm does not have to stand the test of public scrutiny by those who would have a basis for evaluating its accuracy in terms of general orders of magnitude. This might include securities analysts, other researchers and tax reform groups.

Finally, anonymous disclosure will inevitably lead to public speculation about the identity of corporations. Because the benefits of anonymous disclosure are insignificant, a state might as well dash public speculation by identifying the corporations by name. Indeed, if disclosure provides valuable information to competitors, as opponents have argued, these competitors presumably would try to match the released information with public information from Form 10-K and other sources. Those willing to go to this trouble will inevitably break through the anonymity. Consequently, anonymous disclosure does not protect against any competitive disadvantages but only against public attention and scrutiny.

The above discussion, combined with the favorable experience at the national and, to a more limited extent, at the state levels establish a presumptive case in favor of disclosure. Unless compelling reasons exist, state tax data should not be immunized from public scrutiny. The remainder of this section examines such arguments.

F. Will Disclosure Violate a Corporation's Right to Privacy?

The extent of SEC-required disclosure of information by publicly-traded corporations makes it obvious that such corporations have long ago surrendered any claim that their financial data should be protected under some right of privacy. If the disclosure of their federal income tax liabilities and other financial information does not raise a constitutional issue, then neither should the disclosure of their state tax information. As early as 1911, the U.S. Supreme Court upheld a federal law that provided for the public inspection of corporate tax returns against attacks

262. For example, depending on the information covered by disclosure, it might be possible to try to identify the corporations by matching such information with Form 10-K reports and annual reports.

263. See infra part III.G.

264. The remainder of this Section is based upon the author's experiences in various states as well as the issues that emerged in the Massachusetts debate.
that it was unconstitutional. The modern day version of this argument is that disclosure will reveal proprietary information.

To be sure, in certain situations the business affairs of a corporation may be closely identified with those of the shareholders. Revealing the taxes paid by a small, "mom and pop," closely-held corporation might be viewed as violating legitimate expectations of privacy by its shareholders. However, such corporations would be exempt from disclosure requirements limited to publicly-traded corporations.

G. Will Disclosure Reveal Proprietary Information?

A corporation can assert a legitimate interest in protecting the confidentiality of proprietary information. Opponents of disclosure assert that revealing a corporation's state tax data would reveal proprietary information. These kinds of arguments have long marked debates over the disclosure of any kind of financial information. In the era before 1933, the hesitation of many businesses to disclose what currently is considered necessary balance sheet and income statement information and the more recent reluctance of many firms to disclose, or effectively disclose, line-of-business data earnings projections have been explained by business representatives as fear of revealing useful data to competitors. Typically, these arguments are based more on fear than on reality. To illustrate, consider the following argument used by A.H. Belo

266. See infra part III.G.

267. See infra part IV.A.

268. Strauss speculates that for small, public companies and for companies with foreign competitors disclosure will provide competitors with the private details of the company's activities. Strauss, supra note 182, at 13. This problem is most pronounced for small, public companies and for companies with foreign creditors since "there will be an identity between their state and federal return and what they provide to the Massachusetts Secretary of State for public review. They would now have their private financial affairs subject to competitive scrutiny." Id. In the case that Strauss is worried about, where the state and federal returns are identical, it is unclear what a competitor will learn under Massachusetts law that it will not already know from examining the Form 10-K or the company's annual reports. Strauss does not discuss this possibility because his entire paper fails to mention SEC-mandated disclosure. Moreover, Strauss does not address the time delay in publishing any tax information. Finally, if foreign competitors were filing state income tax returns, they could—and should—be subject to disclosure. See infra part IV.A.

Corporation, owner of the *Dallas Morning News*, against a minority shareholder proposal that it become a publicly-listed company:

The company maintains that publishing information required of public companies by the SEC would put it at a severe competitive disadvantage, since the data would be available to its main competitor, the Dallas Times Herald, which is owned by Times Mirror Co., Los Angeles.

Belo maintains that because it is significantly smaller than Times Mirror, financial disclosures required by the SEC would reveal too much of its inner workings. Times Mirror owns several major papers and can group its newspaper financial data for reporting purposes. By contrast, the Dallas Morning News is the only major newspaper property of Belo.\textsuperscript{270}

In responding to the company's argument, one commentator noted that,

\begin{quote}
[O]n at least the revenue side, competing sources already provide considerable information about the *Dallas Morning News*. This paper is a member of the Audit Bureau of Circulations which publishes very detailed unit circulation figures on the Dallas Morning News every six months. The advertising rates of the paper are readily available to an external party in a booklet titled *Retail Advertising Rates*. The list of advertising clients of the paper is available for 15¢ a day (50¢ on Sunday). These competing sources of information are considerably more detailed and cover more facets than does the *sales* figure required in the 10K of a publicly listed company.\textsuperscript{271}
\end{quote}

The same competitive arguments were made in 1973 against the SEC's successful proposal to require more extensive reporting of federal income tax data.\textsuperscript{272} Opponents argued that the disclosure of tax information

\textsuperscript{271} George Foster, *Externalities and Financial Reporting*, 35 J. of Finance 521, 524-25 (1980). The disclosure of sales information in the SEC Form 10-K was also objected to on the grounds that it would cause single-product firms "competitive disadvantage." *Id.* at 531.

\textsuperscript{272} See Adoption of Amendment to Regulations S-X, SEC Accounting Series Release No. 149 (Nov. 28, 1973).
would reveal tax strategies to competitors, but no examples were provided. The SEC concluded that the needs of investors are best served by additional reporting even though there may be an increased risk of adverse consequences at the hands of competitors. SEC regulations and other federal laws already require many corporations to disclose extensive tax and financial information, and apparently such disclosures have not jeopardized the economic interests of the corporations.

When pressed, those who argue that disclosure will reveal proprietary information have never been able to provide a detailed illustration. They have never been able to articulate how knowing the amount of tax that a competitor paid reveals anything of competitive value. Moreover, even if this information were relevant in the abstract, it is unlikely to be available in a timely-enough fashion to be very useful.

For information to be valuable, a business needs to know yesterday what a competitor is going to do tomorrow. By the time a corporation requests the normal extensions and files its return—a precondition to the public's gaining access to whatever tax information is subject to disclosure—the information will be stale (or could be aged to ensure that it becomes stale). Yesterday's information obtained tomorrow is worthless to a competitor. For a businessperson to learn two years after the fact that a competitor paid $X in state taxes or claimed $Y in state credits pales by comparison with what can be learned by all traditional ways of obtaining current information about competitors—reading the trade press, "schmoozing" at trade shows and conventions, searching computer data bases, or hanging out at the local bars that dot the perimeter of large plants.

In investigating the degree to which information divulged under Massachusetts law might be useful to competitors, the staff of the Massachusetts Special Commission on Business Tax Policy interviewed twelve industry analysts. The analysts specialized in different industries including banking, life insurance, biotechnology, electronic

---

273. It was also alleged that disclosure would lead taxing authorities to question tax deductions or challenge the taxpayer's favorable interpretation of items.

274. See SELIGMAN, supra note 269, at 203.

275. Even the concept of proprietary information has no fixed meaning. A former Commissioner of Taxation for New York lists without any explanation the following examples of proprietary information that a New York corporation is required to identify on its state franchise tax return: real estate, whether owned or leased; inventories; other tangible personal property; and business receipts. James H. Tully, Jr., State Tax Secrecy Laws and Federal Grand Jury Subpoenas in Non-Tax Investigations, 46 ALB. L. REV. 78, 84 (1981). A fortiori, much of the information on SEC Form 10-K would be "proprietary."
components, retailing, and computer services. Of the twelve analysts, eight stated that the Massachusetts law would reveal little information of value to competitors for the following reasons: 1) comparable information is available from other reports, such as annual financial reports and reports compiled by consulting firms and underwriters; 2) the information would not be disaggregated sufficiently to be of much value, even if reported on a subsidiary-by-subsidiary basis; 3) tax accounting principles differ so much from financial accounting principles (especially in the case of banks) that tax information provides very little insight into the financial condition and operational characteristics of a company; 4) the information would be disclosed with a long lag; and finally, 5) companies have the option of disclosing either gross profit or tax credit carryovers under Massachusetts law.

One analyst suggested that disclosure might provide insight into product trends and profitability which, over time, might allow competitors to determine business strategies. How a competitor might determine business strategies from the disclosed tax information was never explained. It was also alleged that corporate raiders could use the information to help them select targets for hostile takeovers; which seems somewhat fanciful because of the time lags involved. Takeover targets are most likely selected from the best and most current information available about a firm's national and international financial conditions; Massachusetts tax data, disclosed two or more years after the fact, could hardly be very relevant. The analyst stated that the resulting anti-competitive damage would be most severe in industries where the pace of innovation is slow but price competition is intense, such as retailing. But another analyst, specializing in retailing, felt that the data divulged in tax disclosure reports would reveal nothing that rivals do not already know from other sources.

Yet another analyst agreed that disclosure would be especially harmful to retailers because it would provide insights into the profitability of Massachusetts retail markets with respect to those of other states. Also, by analyzing the tax data of specific stores, in

276. Corporations that file on a combined basis in Massachusetts will release the information covered by disclosure on a combined basis. Even if only one member of the group has extensive operations in Massachusetts, the released data will be aggregated for the combined group as a whole. It is difficult understanding how Massachusetts competitors will learn anything useful from disclosure in this situation.

277. MASSACHUSETTS STAFF DRAFT, supra note 182, at 21-22.

278. Id. at 18.

279. Id.

280. Id. at 22.

281. Id. at 23.
conjunction with other publicly available data, competitors would gain insights into which products in Massachusetts stores are most profitable. Out-of-state rivals could use the data to decide whether to expand stores and which products it should market aggressively within that state.\textsuperscript{282}

Left unexplained (once again) was how tax data would help identify which products were most profitable. A retailer, such as a department store, might sell thousands of different products. Even assuming that the pace of innovation is slow in the retail industry, certainly fads exist and this year's hot seller may well be next year's dog. The time lag inevitable under any disclosure law would seem to limit the usefulness for competitive purposes of any released information. It is unclear how a competitor would be helped today by learning about which products were relatively profitable two or so years ago. Finally, in areas of retailing, such as apparel, where orders are typically placed months in advance of sale, it is not even clear how a competitor might capitalize on information that was current, rather than at least one year old.

An analyst specializing in life insurance commented on the possible competitive harm that tax disclosure will inflict on automobile insurers.\textsuperscript{283} In the view of the comments from this analyst, many auto insurers believe that Massachusetts is an unattractive place to do business because of its reputation for bad drivers. Recently, however, the automobile insurance market has been profitable. Yet, because the perception lingers that Massachusetts is a poor market, out-of-state competitors stay away.

If believable, these comments describe a rather unsophisticated insurance industry, one in which automobile insurers have no more refined information about the Massachusetts market than its reputation, whether deserved or not, for having poor drivers. Presumably, the industry has better means than relying on hearsay for determining whether automobile insurance is profitable in Massachusetts.\textsuperscript{284}

But more fundamentally, suppose the analyst is correct and because of disclosure more insurance companies started to write policies in Massachusetts. Presumably, this competition would be good for policyholders, resulting in lower premiums and a greater choice of

\begin{itemize}
  \item \textsuperscript{282} Id. at 22-23.
  \item \textsuperscript{283} Id. at 23.
  \item \textsuperscript{284} During a hearing on disclosure, numerous witnesses asserted that disclosure would provide helpful information to their competitors. Not one, however, provided an example that linked the disclosed data with any conclusion that would be useful to competitors. Moreover, none of these witnesses addressed any of the points raised by the analysts in the text who felt that disclosure would reveal little valuable information. See Transcript of Public Hearing, Massachusetts Special Commission on Business Tax Policy (June 1, 1993).
\end{itemize}
options. Indeed, one of the characteristics of a market economy is the general bias in favor of the free flow of information. Unlike a patent, copyright, or some other form of intellectual property, a company should not be able to assert a proprietary interest in whether Massachusetts is a profitable place to write car insurance. Similarly, to the extent that disclosure would increase competition in retailing, consumers would ultimately benefit from the lower prices. Moreover, increased jobs might also be expected.

Indeed, an accepted goal of disclosure in other contexts is increased competition. For example, the Federal Trade Commission's "Line of Business" disclosures instituted in 1974 had as one of their beneficial effects the "increased competition in product markets; firms considering entry into new markets would be better able to discern existing 'excess' profit situations."\textsuperscript{285}

To the extent that disclosure leads to more competition, it is consistent with a market economy. "Contrary to the assertions of many corporate spokesmen, corporate secrecy—not corporate disclosure—is the great enemy of a market economy in a free society."\textsuperscript{286} A market economy relies on the self-corrective mechanism of the marketplace to keep competition robust and monopoly in check. A firm that holds a strong market position resulting in higher than ordinary profits induces the entry into the field of new businesses.\textsuperscript{287} To the extent that disclosure reinforces this mechanism, it facilitates the dynamics of a market economy. This philosophy is similar to that underlying the SEC disclosure rules:

The idea of a free and open public market is built upon the theory that competing judgments of buyers or sellers as to the fair price of the security brings about a situation where the market price reflects as nearly as possible a just price. . . . There cannot be honest markets without honest publicity.\textsuperscript{288}

Consequently, even assuming the analyst is correct, the scale does not necessarily tip in favor of nondisclosure.

Further evidence that the competitive harm argument might be exaggerated comes from Arkansas, where businesses subject to disclosure can apply for an exemption on the grounds that the release of the

\textsuperscript{285} Foster, \textit{supra} note 271, at 531. The Line of Business Program was abandoned during the Reagan years. Peter W. Rodino, \textit{Antitrust is Dead—Long Live Antitrust}, 76 GEO. L. J. 507, 519 (1987).
\textsuperscript{286} Mueller, \textit{supra} note 258, at 71.
\textsuperscript{287} \textit{Id}.
requested information would result in competitive harm.\footnote{289} Apparently, very few businesses have ever requested such an exemption,\footnote{290} although the short seven day period may discourage such requests. To be sure, the Arkansas procedure provides a safety valve; in a state such as Massachusetts where the business community has aggressively fought against disclosure, the safety valve will turn into a dilatory tactic to undercut the law.

H. Will Disclosure Discourage the Filing of Accurate Tax Returns?

The successful operation of the U.S. income tax depends on the voluntary cooperation of taxpayers. A commonly stated rationale for protecting the confidentiality of tax information is to facilitate tax enforcement by encouraging a taxpayer to make full and truthful declarations in its return, without fear that those statements will be revealed or used against it for other purposes. The assumption is that even limited access by government agencies to information obtained from tax returns will deter some taxpayers from truthful reporting. Secrecy is a necessary palliative to taxpayers who might otherwise falsify their tax returns if they knew that non-tax officials would have access to that information.

The "full and frank disclosure" rationale presumes that secrecy helps assure honesty and that publicity discourages it.\footnote{291} If this presumption is correct, the SEC reporting requirements must have led to less honest tax returns—a position that apparently has never been argued in the literature—and one that seems far fetched on its face. If corporations were not induced to file false federal returns by SEC disclosure, why should it be assumed they will do so in response to state disclosure?

Moreover, some researchers have even cast doubt on the asserted relationship between tax return confidentiality and honest reporting by examining a 1976 federal change, in response to Watergate, which dramatically increased the degree of confidentiality accorded federal

\footnote{289} See supra notes 201-02 and accompanying text.  
\footnote{290} See supra notes 202-03 and accompanying text.  
\footnote{291} Opponents of disclosure argue that it will encourage rather than deter tax avoidance because firms will fear the release of proprietary information that could help competitors. MASSACHUSETTS STAFF DRAFT, supra note 182, at 28. The fact that opponents of disclosure believe that it will encourage rather than deter tax avoidance because firms will fear the release of proprietary information is a damaging admission. If they assume that corporations will engage in tax avoidance to hide proprietary information, why not assume that they will engage in tax avoidance for other reasons, which from their perspective, are equally compelling? In short, the argument ultimately can be turned on its head in support of the need for more disclosure rather than less.
income tax returns. Proponents of the change had predicted that the increased level of confidentiality would encourage more honest reporting, but apparently voluntary compliance actually decreased.\textsuperscript{292}

Contrary to the thesis that secrecy induces honest reporting, it could be argued that if taxpayers are publicly accountable for the information furnished on their income tax returns, their incentive to report truthfully would be even greater. Publicity would increase the possibility that employees, competitors, or other business persons will notice glaring omissions and bring it to the attention of the tax authorities.

Public disclosure might actually discourage corporations from minimizing their tax liabilities through tax avoidance techniques. For public relations purposes, corporations required to disclose tax information might be leery of paying only nominal amounts of tax. The scrutiny of the public and the possibility that increased publicity would aid taxing authorities in detecting illegitimate tax avoidance or fraud could help safeguard the integrity of the corporate income tax.

In reality, little is definitively known about the effects of confidentiality on taxpayer behavior and whether for this purpose large corporations should be distinguished from small corporations and individuals. Nor is tax disclosure defended by its supporters as a way of increasing taxpayer compliance.\textsuperscript{293} Tax withholding, information returns, civil and criminal sanctions, and information sharing with other taxing authorities all help to insure voluntary corporate compliance with tax laws. The role played by the confidentiality of returns is simply unknown. Accordingly, both the direction and magnitude of the impact disclosure might have on corporate reporting, especially if only a limited range of information will be published, are sheer speculation.

\textsuperscript{293} The Massachusetts Commissioner of Revenue testified against that state's disclosure law on the grounds it "will not help the Department of Revenue do its job." \textit{Transcript of Public Hearing, Massachusetts Special Commission on Business Tax Policy} (June 1, 1993), at 65. Although disclosure might have some benefit in highlighting transfer price abuses and cases of tax evasion, its real benefits arise in focusing attention on the structure of the tax system. The benefits of disclosure would remain the same even if every tax return were filed in accordance with the law. Disclosure is concerned with the law itself and only tangentially with how corporations comply with the law. In this sense, the focus is different from the Progressives, who saw better tax enforcement as one of the benefits to be gained from their advocacy of disclosure. \textit{See supra} note 88 and accompanying text.
I. Will Disclosure Undercut a State's Business Climate?

Opponents of disclosure argue that it would reflect or exacerbate an anti-business climate in the state. Disclosing corporate taxes would antagonize the business community and fuel the hostility of its enemies. Opponents argue that it would detract from the aura of goodwill that creates a positive "business climate" and would provide one more weight in the balance of factors that may ultimately influence a corporation to relocate its business to a friendlier state.\(^{294}\)

On a general level, this argument proves too much. Any legislation that the corporate community opposes can be characterized as poisoning the business climate. Obviously, in considering any legislative proposal, the intended benefits must be weighed against possible deleterious effects.

On a more specific level, evaluating this argument is difficult because the factors that comprise a state's "business climate" elude easy analysis. Many considerations affect a corporation's view of a state's business climate, and the issues important to one corporation may be unimportant to another. Factors that might contribute to a specific corporation's perception include the cost of energy, land, labor, or

---

\(^{294}\) Strauss argues that,

Given that other states do not require such public reporting and that businesses prefer to keep such matters private, it would appear that Massachusetts disadvantages itself viz a viz other states as a place in which to do business, or to locate or expand in to do business. Certainly holding constant other considerations which affect the business location decision (cost and quality of labor, transportation costs and proximity to markets, the tax costs and quality of various public services, the regulatory environment etc.), the public reporting requirements are a distinct disadvantage.

Strauss, supra note 182, at 13. He concludes that,

[The] newly enacted public reporting requirement is part of the history and tradition in Massachusetts of general political and fiscal instability, and that the legislative process often finds it convenient to target business taxpayers. . . . Given Massachusetts' recent history of fiscal instability, it would be prudent for firms considering to move into the state or expand in the state to ascertain what else, in the areas of corporate tax disclosure or tax policy, lies in store for them.

\textit{Id.}
transportation; zoning regulations; restrictions on construction; the attitude of those public officials with whom a firm most often deals; the speed with which telephone calls are returned from the public sector; the degree of governmental regulations; the way businesses are treated by a tax department's auditors; the level of civility that characterizes interaction with government personnel; the amount of red tape that exists; the number of forms and permits required; and the governmental assistance provided to a new firm and its employees in relocating.\textsuperscript{295} Perceptions of business climate are also based on intangibles and imponderables that defy easy analysis or quantification (e.g., personal idiosyncrasies of executives). But unlike many of the factors that affect the business climate the disclosure of corporate tax information would not affect the cost of doing business or a corporation's "bottom line."\textsuperscript{296}

Many provisions in a tax code are adopted to improve the business climate. Some of these provisions were even adopted at the specific request of a corporation, in an attempt by a legislature to induce the corporation to invest in a state or to remain or expand its operations in a state. It is disingenuous to use the business climate argument in support of the adoption of these provisions and then use the same argument to prevent the public from evaluating in a meaningful way the effectiveness of such provisions.

Even if disclosure were viewed as undercutting the business climate, it is not clear what defensive actions a corporation would take. If disclosure is limited to all publicly-traded corporations that do business in the state, there would be two ways of avoiding this requirement. The first method would be to cease doing business in the state by removing all property and personnel and basically conduct a mail order business.\textsuperscript{297}

\textsuperscript{295} For a fuller discussion, see Richard D. Pomp, The Role of Tax Incentives in Attracting and Retaining Existing Business, 29 TAX NOTES 521 (1985); ROCKEFELLER INSTITUTE OF GOVERNMENT, NEW YORK ECONOMIC DEVELOPMENT WORKING PAPERS, No. 4 (1987), excerpted in 13 PEOPLE AND TAXES (September 1985).

\textsuperscript{296} The Massachusetts Staff Draft felt that the strongest argument against tax disclosure was that it would strengthen the perception that a state is hostile to business. As the staff report admitted, however, this argument is one of the most difficult to evaluate "because it is premised on a potential reaction to a unique piece of legislation that has yet to take effect." MASSACHUSETTS STAFF DRAFT, supra note 182, at 24. Despite this caveat, the Commission itself (as distinct from the Staff) concluded that "corporate tax disclosure will destroy jobs if corporations are required to reveal their identity in their tax reports." MAJORITY REPORT, supra note 181, at 18. This type of incautious, hyperbolic statement characterizes the Majority Report.

\textsuperscript{297} If the business involves the sale of tangible personal property, P.L. 86-272 would ensure that no income tax return would have to be filed if the only (continued)
The second method would be to conduct business in a non-corporate form. Both would be rather extreme reactions.\textsuperscript{298} If a corporation felt so strongly about avoiding state disclosure that it would operate as a partnership, presumably it would have already done so to avoid the SEC's rules on disclosure. Of course, this option could be precluded if disclosure were extended to partnerships above a certain size.\textsuperscript{299}

Any legislative proposal to withdraw, albeit slightly, the cloak of secrecy that protects the confidentiality of corporate income tax data will be controversial. But not all businesses would resist such a proposal, and some might actually welcome it, if only to dispel the negative image that corporations are somehow tax freeloaders. Corporations that pay little or no income tax might be few in number but yet, in the public's mind, they may be seen as representative of business in general. Many taxpayers would be unfairly tarred with the same brush. Disclosure of tax information could help correct the perception that all corporations are undertaxed and thereby enhance, rather than prejudice, attitudes toward business. Moreover, some businesses might respect, if not welcome, legislative efforts directed at examining an important component of the state's revenue structure.

Should disclosure lead to a more level playing field, as it did at the federal level in 1986, businesses in general will benefit. A state that rewards corporations for their business decisions rather than their tax decisions ought to be viewed as advancing the business climate.\textsuperscript{300}

\textsuperscript{298} Even state income taxes, which unlike disclosure, affect a corporation's bottom line, have very little, if any, impact on where businesses locate or expand. See Pomp, \textit{supra} note 193, at 393-409. Accordingly, whether or not a state has a disclosure law should not effect a corporation's decision to expand or relocate in that state.

Further evidence that the disclosure issue is unlikely to affect anyone's locational decisionmaking is found in a report by Massachusetts Governor Weld's office in collaboration with the University of Massachusetts. As part of that study on the Massachusetts economy, over 2000 business persons were interviewed. Not one raised the issue of corporate disclosure. See \textit{EXECUTIVE OFFICE OF ECONOMIC AFFAIRS AND THE UNIVERSITY OF MASSACHUSETTS, CHOOSING TO COMPETE} (1993). Finally, a search of the Massachusetts newspapers in the Nexis computer database failed to find any article about a company's relocation to, expansion in, or relocation from Massachusetts which also mentioned the disclosure issue.

\textsuperscript{299} See \textit{infra} part IV.A.

\textsuperscript{300} By way of evidence, there was substantial corporate support for the Tax Reform Act of 1986. See \textit{supra} note 3.
Finally, the business community has some control over how the media and corporations in other states will come to view a disclosure law. If the business community characterizes a disclosure law as evidence of a state's fiscal responsibility, its desire to introduce more responsibility and openness into government, and its willingness to eliminate waste and inefficiency in its tax system, the business climate should be enhanced rather than undercut.\footnote{301}

\section*{J. Conclusion}

This portion of the article examined the case for and against disclosure. Based on CTJ's experience at the national level and the limited state experience, state-level disclosure promises significant benefits. The arguments against disclosure, many of which could also be made (and in some cases have been made) against SEC-mandated disclosure, do not provide any reasons to reject the case in favor of publicly disclosing tax data. Some of the arguments against disclosure, when analyzed, transform into arguments on behalf of disclosure. Consequently, the next Section assumes that a state will consider adopting some form of disclosure and discusses three major issues that must be resolved in order to implement state-level disclosure: who should be covered by disclosure; what information should be disclosed; and which state agency should administer disclosure.

\footnote{301. For example, the Massachusetts High Technology Council, one of the most vocal opponents of disclosure, was criticized in 1989 for actually helping to create a bad business climate. According to certain executives of high-tech companies, "The [Council's] 10-year-long whine about excessive taxation in Massachusetts has tarred the Council with a negative one-issue image that it cannot shake . . . . But more pernicious than the anti-tax wailing, critics say, is the council's poor-mouthing of the state's business climate for high-tech firms." Alex Beam, \textit{Our Technology Graveyard}; \textit{T.G.I.W.}, \textit{Boston Globe}, July 26, 1989, at 21. An author of a study on Route 128, Massachusetts' equivalent of Silicon Valley, described the Council as "spread[ing] the bad image of the state far and wide. If you say something is dying often enough, you hasten the problem along." \textit{Id}.}
IV. FORMULATING A POLICY ON STATE DISCLOSURE

A. Who Should Be Covered By Disclosure?

This article has assumed that disclosure should extend to publicly-traded corporations but not individuals. Although situations occur where the law requires financial information about individuals to be disclosed, individuals are generally perceived and treated as having greater rights of privacy than corporations. The most compelling arguments in the Congressional debate over public access to tax returns involved individuals and their rights to privacy. There should be a higher burden of proof for private citizens than in the case of publicly-traded corporations that disclosure of individual tax information justifies the resulting loss of privacy. With the exception of individuals who are the beneficiaries of significant tax expenditures, this higher standard does not justify the wholesale release of individual tax information.

In addition to publicly-traded corporations, disclosure should also be extended to banks, utilities, and insurance companies, doing business in a state, whether publicly-traded or not. These corporations are key economic actors in a state economy in which the public already has a special, well-established interest, as evidenced by the extensive reporting and regulatory provisions to which these industries are subject. Because they already submit extensive financial data to state authorities, no new privacy issues or compliance burdens arise by bringing them within the purview of a disclosure law.306

302. For examples of the many situations in which the salaries of employees are public information, see Linder, supra note 175, at 967-68. 303. See infra part B.

304. For an opposite view, see Linder, supra note 175 (advocating that the income tax returns of millionaires should be published).

305. If disclosure were limited to only publicly-traded corporations, the law would not cover subsidiaries of publicly-traded corporations (unless the subsidiary itself were publicly traded). Publicly-traded corporations would have the ability to avoid the law by creating a holding company to own their stock. To reach these situations, disclosure must reach corporations that are controlled directly or indirectly by publicly-traded corporations.

306. As part of his criticism of the Massachusetts statute, Strauss raises the question whether it is "appropriate or compelling to have different public disclosure standards for individuals viz a viz for profit and non-profit organization?" Strauss, supra note 182, at 13. Strauss finds it "peculiar" that Massachusetts requires organizations to report publicly but not individuals. Id. at 11, 12. I would have thought it was too late in the day to raise this question. For
Corporations that are publicly-traded on foreign exchanges but not on United States exchanges also should be included for purposes of disclosure. Many developed countries have financial disclosure laws similar to those of the United States. Although in some cases these laws may not be as detailed as those of the United States, the principle of disclosure is well established. All the reasons for including United States publicly-traded corporations within a disclosure law extend equally to foreign-traded corporations. Treating both groups the same preserves a level playing field.

In summary, at a minimum disclosure should cover publicly-traded corporations, whether domestic or foreign, doing business in the state, and banks, insurance companies, and utilities, doing business in the state,

decades now, we have demanded extensive reporting by publicly-traded corporations and regulated industries with nothing comparable for individuals or partnerships. Strauss raises the possibility of requiring a high level of disclosure from both businesses and individuals. His reasoning is that,

[M]ost of the population is more familiar with the mechanics of filling out individual income tax returns and the implied issues of equity and tax avoidance which accompany various deductions and sources of income. That greater knowledge and understanding should improve the enforcement value derived from such public review, since the general public would more readily understand this sort of information. . . . The circumstances of many business tax returns, especially of those of multistate businesses, are inherently more complicated. It is unlikely that the general public understands Massachusetts business tax rules or those of other states as well as it understands the tax rules governing individual income taxes. . . . Also I doubt the public appreciates the considerable ambiguity in many state business income tax statutes. I would guess, overall, that public understanding of state business tax rules is in fact quite weak.

Id.

Strauss's arguments, could, of course, be used to justify disclosing corporate tax information as part of educating the public. Moreover, the public did not seem to have much trouble understanding the implications of the federal data released by Citizens for Tax Justice preceding the 1986 Tax Reform Act. The fact that some of the issues surrounding the corporate income tax are abstruse perhaps explains the sorry state of many state tax laws, see Pomp, supra note 193, and, if anything, supports efforts at educating the public. Finally, and quite surprisingly, Strauss does not mention or refer to the extensive reporting already required by the SEC. The Massachusetts Staff Draft acknowledges, unlike Strauss, that the appropriate balance between confidentiality and the public's right to know may be different for corporations than for individuals. MASSACHUSETTS STAFF DRAFT, supra note 182, at 11.
whether publicly-traded or not. All of these corporations are already accustomed to publishing detailed financial information about their operations, including extensive data on their federal tax liabilities. These corporations have long ago surrendered claims of confidentiality and privacy regarding their financial affairs. Requiring the release of state-specific information is a small additional compliance burden.

Some states might wish to extend disclosure to large corporations that are privately-held, such as Bechtel, Egghead, Mars, Computerland, Milliken, Montgomery Ward, UPS, American Standard, Revco, WordPerfect, Caltex Petroleum, and Gateway Computers. Large, privately-held corporations are key participants in a state's economy and may also be responsible for helping to shape a state's tax regime. Unlike small "mom and pop" corporations, large privately-held corporations do not serve merely as the alter ego's of their owners. The business matters of the corporation are not inextricably intermingled with the individual shareholder's personal financial affairs. Moreover, unlike a small "mom and pop" corporation, large privately-held corporations can easily comply with a disclosure law. Accordingly, a state could set forth certain criteria (e.g., assets, income, net worth) to determine which privately-held corporations might be subject to disclosure.

In the case of tax expenditures, those situations in which a state "spends" money through special non-normative tax provisions, such as tax credits or special deductions or exemptions, disclosure should be extended to all beneficiaries, corporate or individual, whether publicly traded or not. The increased accountability and openness that would accompany disclosure can properly be viewed as a legitimate requirement of any entity or individual benefiting from the expenditure of public funds. Indeed, one of the major arguments in favor of SEC-disclosure applies equally to identifying the beneficiaries of tax expenditures:

The financial community, the accounting profession, the bar and industry generally have come not only to accept but to support the principle that those who make use of the public's money must supply the information essential to the formulation of intelligent investment decisions, and that it is a proper

307. See infra part B.
308. In many states, the salaries of state employees are public information. See Linder, supra note 175, at 967. No distinction should be drawn between an individual who receives one form of public expenditure (a salary) from an individual who receives another form of public spending (a tax expenditure).
responsibility of government to keep an eye on the accuracy and adequacy of such information.\textsuperscript{309}

Further, identifying beneficiaries by name is consistent with the philosophy underlying the concept of a tax expenditure. The major tax expenditures tend to be investment-related subsidies, like an investment tax credit. If these expenditures took the form of an explicit spending program, the identity of the recipients would most likely be public information either as part of the application process for the subsidy or through freedom of information laws. Information that sensibly would be made public as part of a spending program should be similarly disclosed as part of a tax expenditure analysis. The public’s right to know who is receiving public funds should not be bypassed simply because benefits are offered through the tax system rather than through direct spending programs. To make the flow of information manageable, however, only corporations or individuals receiving tax expenditures above a certain aggregate amount should be subject to disclosure.

B. What Information Should be Disclosed?

1. Tax expenditures

Conceptually, any tax can be analyzed as if it consists of two distinct structures. The first would be its normative structure; for example, those provisions that are necessary parts of a tax structure intended to tax only "income."\textsuperscript{310} These provisions would include rules on defining gross income, business deductions, the apportionment formula, and so forth. A second set of provisions are known as tax expenditures. All governments use the tax systems for more than just raising revenue. Tax laws typically contain provisions intended to subsidize favored economic activities or to relieve personal hardships. These provisions accomplish their goals by granting a tax reduction to selected taxpayers.

Because these "subsidy" or "relief" measures are spending programs implemented through the tax system, they commonly are known as tax expenditures.\textsuperscript{311} A tax expenditure can be viewed as if the taxpayer had

\textsuperscript{309} SEC DISCLOSURE TO INVESTORS, supra note 241, at 46.

\textsuperscript{310} For a perceptive discussion of the definitional issues, see Michael J. McIntyre, A Solution to the Problem of Defining a Tax Expenditure, 14 U.C. DAVIS L. REV. 79 (1980).

\textsuperscript{311} The tax expenditure concept was first developed in the United States by the late Professor Stanley S. Surrey of Harvard Law School. His work in this area reflected his experiences as assistant secretary of tax policy under Presidents Kennedy and Johnson as well as the insights gained through his other academic (continued)
actually paid the full amount of tax owed in the absence of the special provision and had simultaneously received a grant equal to the savings provided by the special provision. Characterized in this manner, a tax expenditure is just one of a number of ways of providing governmental assistance and should be reexamined periodically using traditional budget and funding criteria: How much money is being spent; how is the money being distributed; is the expenditure achieving its intended goal; and is the expenditure the best means of achieving such a goal?

The concept of a tax expenditure is a powerful analytical tool that has revamped traditional ways of viewing a tax system. One application of the concept has been the compilation of a tax expenditure budget, which identifies "subsidy" or "relief" provisions and estimates their cost in forgone revenue. In 1968, the Treasury Department published a tax expenditure budget analyzing the federal personal and corporate income taxes. In 1974, the Congressional Budget Office began publishing its own annual tax expenditure report, and in the same year the Office of Management and Budget began including a tax expenditure analysis with the President's annual budget request to the Congress. No doubt inspired by these federal actions, the concept of a tax expenditure budget spread to the states. By 1993, twenty-two states prepared some form of tax expenditure budget.

An unusually voluminous and fertile collection of literature exists on the concept of a tax expenditure. This literature makes a convincing

and scholarly pursuits. The tax expenditure concept has been described as the "major innovation in tax and public finance during the last twenty or thirty years." See Richard D. Pomp, The Mortgage Interest and Property Tax Deduction: A Tax Expenditure Analysis, 1 CANADIAN TAX 23, 23 n.1 (1979). The concept of a tax expenditure was developed further by Paul McDaniel, a former professor of law at Boston College Law School and a long-time collaborator of Surrey's. For a discussion of state tax expenditures, see Richard D. Pomp, Rethinking State Tax Expenditure Budgets, 5 PUB. BUDGETING AND FIN. MGMT 337 (1993).

312. The estimates are made on the assumption that a taxpayer's behavior would remain unchanged if the tax expenditure were eliminated. While this assumption might be unrealistic in some circumstances, a similar assumption is implicit in stating the cost of explicit spending programs. For example, a job retraining program that spends $100 is described as "costing" $100, even though if the program were eliminated, the amount spent on some other program, such as welfare, might increase.

315. For a small sampling of the literature on tax expenditures, see STANLEY S. SURREY, PATHWAYS TO TAX REFORM: THE CONCEPT OF TAX EXPENDITURES (1973); Stanley S. Surrey & Paul R. McDaniel, The Tax Expenditure Concept and the (continued)
case that unless attention is paid to tax expenditures, a state does not have either its tax policy or its budget policy fully under control. The State of New York provides dramatic evidence of the correctness of this warning. In 1969, New York adopted an investment tax credit ("ITC") without any revenue estimate of its cost. By 1983, more than $660 million in investment-related tax credits had been claimed by corporations. In 1982, the most recent year for which detailed data are available, two corporations used nearly forty percent of the total amount of credits used that year. Until a 1985 report by New York's Legislative Tax Study Commission, the investment tax credit, estimated to cost $224 million in 1993—more than the budgets of most state agencies—received less review and analysis than did explicit spending programs that cost a million dollars or less. For the 1986 liability year, eighty-two percent of the credits earned in that year went to companies paying New York's minimum tax. It is inconceivable that had the investment tax credit been implemented as an explicit spending program, sixteen years would have elapsed before any rigorous study was undertaken.

Without identifying the corporate beneficiaries, it is difficult, if not impossible, to evaluate whether and to what extent a credit such as the ITC, is helping or hurting a state. For example, are companies receiving a credit for consolidating a factory while moving most of their operations out-of-state? Is the credit encouraging the purchase of machines that eliminate jobs? Once a spending program is adopted in the guise of a tax provision, it tends to escape the same level of accountability that is applied to explicit expenditures. Because tax expenditures represent silent or back door spending, which should be scrutinized annually at the same level as explicit spending programs that are formally included in a budget, they should clearly be part of any information that is disclosed on a corporation-by-corporation basis. This information is easily

317. See Pomp, supra note 193, at 635.
318. Id. at 615-72.
320. This proposal was first made in Richard D. Pomp, State Tax Expenditure
Budgets—and Beyond, in STEVEN GOLD, THE UNFINISHED AGENDA FOR STATE TAX (continued)
understandable and explainable to legislators and should be of concern to policy makers and analysts on an ongoing basis.

The type of information disclosed will be determined by the nature of the tax expenditure. At a minimum, the amount of the special tax provision claimed along with the resulting tax savings should be disclosed by the name of beneficiary.\textsuperscript{321} In the case of an investment tax credit, for example, the amount of the credit claimed, the amount used, the amount of any carryovers, and the amount of the investment that triggered the credit should all be disclosed.\textsuperscript{322} Similarly, if a credit is based on a certain amount of employment, or research and development, those amounts should also be disclosed. Depending on the nature of the tax expenditure, the reasons leading to its adoption, plus other state-specific features surrounding its use, a state might wish to have other information disclosed that would aid in evaluating the efficacy of the tax expenditure.

2. Normative provisions

Normative provisions of a state corporate income tax are not motivated by the same subsidy or relief considerations underlying the adoption of tax expenditures. Nonetheless, normative provisions represent a series of policy decisions and trade-offs among competing values, such as administrative convenience, simplicity, equity, economic neutrality, and efficiency. These trade-offs were often made decades ago and remain memorialized in existing statutes. Recent developments and trends challenge the premises underlying the trade-offs. These trade-

\begin{footnotes}
\footnotetext{321}{As discussed above, see supra part A, in the case of tax expenditures there is no strong reason why disclosure should be limited to publicly-traded corporations.}
\footnotetext{322}{To be sure, the amount of the triggering investment could be calculated based on the amount of the credit claimed. But there is no reason for third parties to make this calculation when the information is readily available from the taxpayer. Moreover, by requiring the taxpayer to disclose the amount of the underlying investment, a check is provided in those cases where the credit might have been miscalculated.}
\end{footnotes}

Under the Massachusetts law, a corporation discloses its Massachusetts taxable income and its tax. It does not disclose its credits but the difference between its taxable income multiplied by the tax rate and the tax paid is the amount of its aggregate credits. This approach is acceptable in a state such as Massachusetts, which does not have many credits. In other states it would be more useful to have the corporation disclose the amount and identity of each of its credits.
offs need to be reexamined because of changes in the judicial climate; a relaxation of federal controls, especially in the areas of transportation, communications, and banking; startling advances in technology that have facilitated innovative business practices; a flurry of federal tax legislation; the rise of multinational corporations and conglomerates; and the shift in the economy from manufacturing to service.  

The nature of the information disclosed with respect to the normative provisions of a tax might vary among the states because of state-specific statutory differences. Nevertheless, although the states vary in the details of their approaches, there are more similarities than differences so that some general observations are appropriate.

At the least, it is useful to disclose any gaps between a corporation's income for financial accounting purposes and its federal taxable income, which to one degree or another is the starting point in calculating most states' income taxes. Accordingly, a corporation might be required to disclose its accounting book income and identify significant differences between that amount and its federal taxable income.

Many provisions in a state income tax are automatically incorporated from federal law. For example, with varying degrees of fidelity, all states base their definition of taxable income upon the federal definition. But provisions that are normative in the context of the federal system may be problematic in the context of a state income tax.

Consider, for example, the so-called dividends received deduction. For federal purposes, a corporation may deduct at a minimum 70% of the dividends received from taxable domestic corporations; 80% may be deducted if the dividends are received from a corporation in which the payee owns at least a 20% interest; and 100% may be deducted if the payee owns at least an 80% interest. Many states track this feature of federal law; others provide even more generous treatment by allowing a deduction for all dividends.

The deduction for intercorporate dividends serves as a useful example because in most states it is a long-standing provision that rests on questionable assumptions that should be reexamined. The normative rationale for the federal dividends received deduction is the elimination of multiple taxation. The profits out of which the dividend is paid

327. See, e.g., BORIS I. BITTKER & JAMES S. EUSTICE, FEDERAL INCOME TAXATION OF CORPORATIONS AND SHAREHOLDERS 5-23 (1987). The deduction can also be justified using non-normative criteria, such as making a state attractive for (continued)
have already been taxed at the federal level as income of the payor. A legitimate policy question arises whether those same profits should be taxed again at the federal level when received by the payee.

At the state level, however, the state levying a tax on the payee is not necessarily the same state that taxes the profits out of which the dividend was paid. As an additional complication, even if the same state taxed the profits out of which the dividend is paid, the business apportionment factor of the payor is unlikely to be identical to the business apportionment factor of the payee. In other words, the premises upon which the federal dividend received deduction is based are not equally relevant in the context of a state income tax.

The dividend received deduction was purposely chosen as an illustration. First, it nicely demonstrates the possibility of state law going astray when it blindly mimics a federal provision. Second, the dividend received deduction is the kind of long-standing tax provision that escapes the attention of most legislators. Third, administrative convenience, which often explains why a state incorporates a federal provision, does not carry much weight with respect to this deduction. A corporation can easily in calculating its state taxable income add the amount of its federal dividend-received-deduction, which appears on a separate schedule on the federal corporate return. Fourth, the state dividend received deduction can result in the restructuring of a multistate business for tax avoidance purposes.

For example, consider a corporation that is conducting a multijurisdictional business, taxable in State A. Assume A allows a 100% dividend received deduction. Orthodox tax planning would determine whether the corporation could reduce its tax liability in A by incorporating its out-of-state division and repatriating the profits of the subsidiary as a tax-free dividend. This type of tax planning might well escape attention.

holding companies. Under this rationale, the provision would be properly viewed as a tax expenditure. See McIntyre, supra note 310.

328. The text assumes that the dividends constitute apportionable business income; other variations are possible. See generally Jerome R. Hellerstein, I State Taxation, § 9.1-9.19 (1983).

329. For example, it would be difficult to imagine a state being able to enforce rules on fringe benefits that deviated widely from the federal rules.

331. The incorporation of the out-of-state subsidiary will affect the taxable income reported to A (assuming no combined report is applicable), the business apportionment factor in A, as well as the taxable income and business apportionment factors of other states with which the corporation has nexus (again assuming no combined reports are applicable in these other states). The (continued)
In addition to the dividend-received-deduction, a state might well be interested in identifying other provisions that it automatically incorporates by using federal taxable income as its starting point.\textsuperscript{33} A state might find that the reasons that led to the federal deduction might carry little weight at the state level.

At present, most states probably have no information on the amount or distribution of revenue they forgo by implicitly adopting features of the Internal Revenue Code. Such information would not necessarily be included in a tax expenditure budget. Disclosing by name of corporation the amount that it benefits from a federal provision that had been adopted by state law is a necessary first step in identifying which provisions should be subject to a cost benefit analysis. In each state, tax policy analysts, legislators and their staff, and tax administrators should be able to identify which provisions in the corporate income tax should be covered by a disclosure law.

Many states allow corporations to claim additional deductions in moving from federal taxable income to state taxable income. The more significant of these should also be subject to disclosure.

After calculating state taxable income, a corporation typically apportions that amount to a state using an apportionment formula. The formula usually takes into account the percentage of a corporation's property, payroll, and receipts attributable to the taxing state. The components of this formula are useful for identifying both tax avoidance techniques and long-run trends and should also be part of the information disclosed.

For example, major corporations that have a low in-state receipts factor may highlight a need for a state to examine the adoption of a throw back or a throw out rule. Further, an abrupt change in a property or

creation of a subsidiary also lays the groundwork for using transfer pricing to shift profits from A to lower taxed states.

\textsuperscript{332} A recent study of the Connecticut corporate income tax, which exempts all dividends, calculated that one percent of corporate taxpayers reported 83.2\% of the total dividends. Three firms each reported dividends of more than $100 million. \textit{Task Force on State Tax Revenue, Final Report—Business Tax} 62-72 (1991). Some legislators on this task force were shocked by the existence of a dividend-received-deduction and the accompanying data. Some of these same legislators, however, had voted for the exemption when it was introduced in 1981.

\textsuperscript{333} Some federal provisions commonly incorporated into state law include the deduction for state income taxes, see Richard D. Pomp, \textit{State Corporate Income Taxes: The Illogical Deduction for Income Taxes}, 42 Tax L. Rev. 419 (1987); the net operating loss deduction, see I.R.C. \textsuperscript{\textsection} 172 (1993); the taxation of DISCS and FSCS, see \textit{Legislative Commission on the Modernization and Simplification of Tax Administration and the Tax Law, The N.Y. Treatment of DISCS and FSCS} (1986); and the treatment of interest from state and local bonds.
payroll factor involving a corporation that is known not to have changed its operations significantly may also suggest the use of tax avoidance techniques warranting further analysis. Data such as gross receipts, gross sales, or gross profits can also be useful in identifying transfer pricing abuses. In order to further help identify possible transfer pricing problems, corporations should disclose the names of any related corporations with which they have had any transactions, and the nature and extent of those transactions.

Specialized industries, such as insurance and banking, are typically subject to special tax regimes. In many states, insurance companies are subject to a tax on premiums rather than an income tax. Items subject to disclosure will thus differ in these cases from what is required of general business corporations.

Finally, corporations should have the right to explain any of the disclosed information in further detail. Proper forms should be developed and supplied upon which such corporations could supplement and explain their disclosure data.

C. How Should the Mechanics of Disclosure Take Place?

Little is gained from procedures that require the public to request affirmatively information from a state on specific corporations. Instead, a state should publish whatever information is subject to disclosure in a readily usable format.

If the information subject to disclosure is limited to items found on the return, the tax department would be the logical agency to administer the law. Presumably, the information would already be keypunched into computers for use in audit selection. This information could be printed out in a standard format and made available to the public.

A possible problem with this approach lies in whether it would violate the section of the Internal Revenue Code that establishes safeguards which a state must impose as a precondition to obtaining federal returns or return information from the IRS. A violation of this section would be serious because most states have entered into an exchange of information program with the IRS, which provides state tax administrators with valuable audit leads. The question that arises is

334. See supra note 230 and accompanying text.
335. Specifically, a state cannot require a taxpayer to "attach to, or include in, any State tax return a copy of any portion of his Federal return, or information reflected on such Federal return, unless such State adopts provisions of law which protect the confidentiality of the copy of the Federal return (or portion thereof) attached to, or the Federal return information reflected on, such State tax return." 28 U.S.C. § 6103 (p)(8)(A) (1993).
how to interpret this provision if a state law requires the disclosure of information contained on the federal return, such as federal taxable income.

In an informal opinion, the IRS told the staff of the Massachusetts Special Commission on Business Tax Policy that as long as the Secretary of State's office obtains the disclosed data from the reports filed with it by corporations, which is what the Massachusetts law provides, there would be no violation of the statute. The informal view of the IRS is that it has entered into an information sharing agreement with the Massachusetts Department of Revenue, which has no role in the preparation of the taxpayer-specific reports that are disclosed. Under the Massachusetts disclosure law, the Department of Revenue would be honoring the agreements so that no violation would exist. The Massachusetts Commissioner of Revenue independently reached the same conclusion.

Although their opinions appear to be a technical interpretation of the statute, both the Massachusetts Commissioner and the IRS reached the right answer. The section of the Code at issue was introduced in the aftermath of Watergate. The abusive use of income tax returns during Watergate focused on individual returns and those of non-profit organizations, rather than on corporate returns.

For example, the House Internal Security Committee examined the tax returns of Students for a Democratic Society, the Black Panther Party, the New Mobilization Committee to End the War in Vietnam, the Progressive Labor Party and the returns of officers of these groups. Other government agencies made extensive use of individual returns. The Senate Committee on Government Operations used tax returns for investigations of riots, civil and criminal disorders and campus disturbances. The Civil Service Commission used tax-return data to investigate job seekers; the Veterans Administration used returns to check the income of pension claimants; the Federal Housing Administration looked into the eligibility of families for housing assistance by inspecting their income tax returns. Income tax returns were also examined by the Federal Communications Commission in ferreting out

336. MASSACHUSETTS STAFF DRAFT, supra note 182, at 16-17. Amazingly, the Commission report (as distinct from that of the Staff), fails to mention this opinion and cites the possibility of jeopardizing the exchange agreements with the IRS as one of the reasons for voting to change the current law. MAJoRITY REPORT, supra note 181, at 22.

337. Transcript of Public Hearing, Massachusetts Special Commission on Business Tax Policy (June 1, 1993), at 67.

"payola" taken by disc jockeys and the Federal Home Loan Bank Board used returns to determine whether activities of savings and loan associations and their staffs violated federal laws. The Securities and Exchange Commission was a regular user of tax returns in its surveillance of stockbrokers. The Small Business Administration used tax data to decide on the merits of loan applicants and to assist in pressing for loan repayments. Apparently, the biggest user of returns for routine law enforcement purposes was the Social Security Administration. The biggest users for investigative projects were the Justice Department and U.S. Attorneys, who had easy access to tax returns. It was reported that U.S. Attorneys inspected more than 18,000 individual returns in 1974.339

Because the Watergate abuses centered on individuals and not corporations, it seems reasonable to read the relevant section of the Code as being limited to individuals.340 Also, because a corporation’s federal taxable income can be inferred from information contained in the Form 10-K and in annual reports, there is no need for an overly broad reading of the statute.

Moreover, suppose a state, instead of using the common approach of requiring a corporation to use federal taxable income as its starting point, actually adopted as state law all of the federal provisions that enter into the calculation of federal taxable income but called this amount "state taxable income." Suppose that the state now required disclosure of that amount. It is hard to understand why that state should be denied the benefits of the IRS exchange of information program because it chose to disclose the amount of a corporation’s state taxable income. Why should a different result be reached just because a state chooses to avoid the cumbersome process of explicitly adopting all of the federal provisions that impact the definition of taxable income and incorporates them by reference?

This last point supports not only the informal opinion of the IRS regarding the Massachusetts disclosure law, but also supports the position that no violation of the Code would result even if a tax department were the agency that administered a disclosure law. Any doubts on this matter could be resolved through an official pronouncement by the IRS or through an amendment to the Code. Alternatively, the entire issue could be avoided if the SEC were to mandate the disclosure of more detailed information on state income taxes.

If the informal opinion of the IRS regarding the Massachusetts law reflects official policy, a state will avoid violating the Code by

339. Id.

340. This reading is supported by the text of the statute which refers to "his Federal return," suggesting that the draftspersons were concerned about individuals. I.R.C. § 6103(p)(8)(A) (1993).
following the Massachusetts approach of having a corporation submit the required information to the Secretary of State (or some other person or agency other than the tax department). If a state chooses to disclose information that the tax department would not normally have because it does not appear on the return, little loss in administrative efficiencies would result if a corporation submits its information directly to the Secretary of State.

The real advantage in having the tax department involved arises from the assurance that the information being released is the same information appearing on the returns that were filed. If the tax department is not involved in the process, adequate safeguards must be provided to both ensure that all corporations covered by the law actually file with the Secretary of State, and that the information submitted is accurate. For example, a certified public accountant should be required to attest to the accuracy of the information reported. In addition, a list of publicly-traded corporations doing business in the state, as well as other entities subject to disclosure should be published so that it could be cross-checked against those filing with the Secretary of State. The problem of verifying the data released would be particularly acute if a state adopted the Massachusetts proposal of anonymous disclosure, in which a corporation is not identified by name but only by a number.341

CONCLUSION

The current debate over the disclosure of state corporate tax data has hoary roots. At the national level, starting with the Civil War income taxes, there has been a robust debate over the extent to which the public should have access to federal tax information of both individuals and corporations. This debate, however, primarily concerned not large corporations but individuals and their rights of privacy; when corporations entered the discussion at all, it was typically "mom and pop" operations which could be viewed as the alter ego's of their owners. The few times when Congress did concentrate on the differences between individuals and corporations, it recognized that legitimate reasons existed for granting more public access to corporate data than to individual data.

The SEC has essentially resolved the federal debate by imposing extensive financial reporting responsibilities on publicly-traded corporations, including the release of detailed information on federal income taxes and the aggregate amount of state income taxes that are paid. Proposals for state-disclosure would require that the state income tax information be disaggregated and presented in more detailed format.

341. See supra part III.E.
These proposals are intended to facilitate thoughtful tax policy making and more accountability and openness in government. They would also complement the SEC-mandated disclosure.

Compared with the much more extensive reporting burdens already imposed on corporations by other federal and state statutes and the amount of financial information now in the public domain, proposals for state-level disclosure are unexceptional in terms of both the administrative burden involved and the type of data covered. Further, the virtues of disclosure were graphically demonstrated by the efforts of CTJ at the federal level, which resulted in many of the corporate tax changes in the Tax Reform Act of 1986. Perhaps it is the fears of those benefiting from flaws in the existing tax laws, more than any inherent defect in the proposals, which explain the contentious opposition of elements of the business community in Massachusetts, the one state that has adopted a comprehensive approach to state disclosure. In theory, the business community, as a whole, should be supportive of attempts to improve and rationalize government policy making.

Most of the arguments against disclosure, similar to the arguments often raised against proposals that threaten the status quo, involve the incantation of threadbare and shopworn slogans. Others are based on speculation and unsupported assertions. While opponents, who may not speak for the entire business community in a state, are perhaps sincere in their fears, their arguments fall well short of rebutting the benefits that would accompany disclosure.

POSTSCRIPT

On January 4, 1994, Massachusetts amended its disclosure law to substitute a numerical code for the actual names of corporations.\textsuperscript{342} This action was preceded by a series of stories in The Boston Globe analyzing some of the returns that were filed under the old law. It was estimated that 7000 companies would file disclosure reports by the December 31, 1994 deadline of the old law, but noncompliance was rampant. By the deadline, only around 200 banks and insurance companies had filed, and only 188 other corporations had filed.\textsuperscript{343}

According to The Boston Globe's analysis, the reports showed that some companies took hundreds of thousands of dollars in Massachusetts tax credits intended to create jobs while they were laying off workers.

\textsuperscript{342} Frank Phillips & Scot Lehigh, Marathon Day Ends Lawmakers' Year: Vote Down Tax Disclosure Law, Back Bone Marrow Transplant Measure, BOSTON GLOBE, Jan. 5, 1994, at 23; see supra parts II.A; II.E.

Also, the reports showed that the effective tax rate for Massachusetts corporations varied widely.\textsuperscript{344}

In an interview with \textit{The Boston Globe}, an executive of one corporation that claimed substantial tax credits admitted that such credits were not essential to the business expansion. "The credits are largely symbolic. It's likely we would have expanded here anyway. But the tax credits were an additional inducement to stay in Massachusetts."\textsuperscript{345} The credits disclosed on the reports suggested that the State may have underestimated the cost of corporate tax incentives, especially the research and development credit. An analysis by the Tax Equity Alliance for Massachusetts ("TEAM"), concluded that the total tax credits could cost more than double the State's estimate.\textsuperscript{346}

One-quarter of the 188 non-financial corporations filing reports paid only the minimum corporate income tax of $456, which is substantially less than what the average Massachusetts family pays.\textsuperscript{347} Commenting on this, one former state revenue department official stated, "This is something corporations and the state tax department have known about for some time. Now with the release of these forms, the public is finally able to get in [sic] the dirty little secret of how favored corporations are compared to individual taxpayers."\textsuperscript{348}

Despite the explosive nature of the information revealed, some of the corporations opposed to the disclosure law said they were more concerned about its symbolism than the information they had to reveal. The chief financial officer of Reebok International Ltd., for example, said "It's not a big deal. With publicly traded corporations most of this information is already available elsewhere, our real concern is what's next? Once you know how much we pay in taxes, what will you demand to know next?"\textsuperscript{349} A spokesman for Gillette stated that "We are opposed [to disclosure by name of corporation because] in principle . . . it adds another layer of bureaucracy to doing business in Massachusetts."\textsuperscript{350}
